NIVELCO is one of the leading manufacturers of precision engineered level measurement instruments, with more than a million units sold worldwide. We are represented on three continents by numerous subsidiaries and distributors, and our products are used in a vast array of industrial applications.

We are committed to building long-lasting and successful business relations with our partners. We aim to provide the best quality and unmatched reliability both in our services and our products. We aim to reduce your costs, streamline manufacturing, and to improve productivity.

Our quality indicators have been showing excellent results and steady development for decades due to our strict quality policy.

In 2010, we extended our 2-year warranty period to 3 years for our products, and from 2018, most of our instruments come with a 5-year full warranty, which is unprecedented in the industry.

We are further inspired by all the positive feedback from our clients and partners to continue striving to provide the highest quality services and products.

THE STORY OF A FAMILY VENTURE

After training as an engineer at the "ITT Standard" telephone company, Endre Szőllős started his own business in 1939, designing and producing telephone systems. Even during the troubled times of World War II, business was growing, and it provided an excellent training opportunity for Endre's sons. After obtaining their university degrees in electrical engineering and economics respectively, and the untimely death of their father in 1969, Tamás and András Szőllős took over the company. By 1982, the production of a series of industrial controllers had led to a developing specialization in level measurement and control, and NIVELCO was founded. By the time free international trade reached Hungary in 1989, NIVELCO had a full range of level control products and immense production capabilities, backed by impressive in-house manufacturing and engineering facilities. In 1989 NIVELCO developed the world's first "compact" ultrasonic level transmitter, offering a combined sensor/transmitter in one unit. It had a major impact and secured a leading position for the company in the world market.

NIVELCO took the opportunity offered by the newly available markets and established trade relations with various notable foreign distributors and sales agents. Building on the already existing channels into neighboring countries, NIVELCO invested in its own sales organizations and offices in Austria and Poland, then later in the Czech Republic, Romania, India, the USA, Croatia and Greece. The company's success in these ventures demonstrates that by maintaining business principles, continually improving expertise and skills, it can compete with the top suppliers successfully by

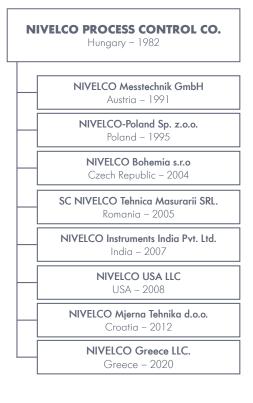

- manufacturing a wide range of products to suit all applications,
- investing in advanced technology, expertise, and product development,
- enforcing strict quality management guidelines and control systems,
- developing worldwide marketing, sales and service support,
- providing fast and flexible in-house production and customer order logistics,
- making use of a company-wide IT system for full product design and production data,
- maintaining fair and modest pricing, ensuring the capital for future customer support and development,
- continually investing in employees and work relations.

Even though today's globalized world economy favors multinational giants, among the ranks of medium-sized companies, NIVELCO pursues the highest level of customer satisfaction and manufactures products with high added intellectual value. NIVELCO proves that flexible, medium-sized, customer-led companies can find their place in the market and successfully maintain their independence.

Tamás Szőllő

1982	NIVELCO is founded NIVOSONAR – the first Ultrasonic level transmitter
1984	NIVOCONT – Vibrating rod level switch
1986	NIVOCAP – Capacitive level transmitter
1989	NIVOSONAR – Compact Ultrasonic level transmitter: A WORLD FIRST!
1991	NIVELCO Messtechnik (Austria) is established
1992	New factory is opened in Budapest
1994	NIVOPOINT – Float level switch NIVOMAG – Magnetic coupling level switch
1995	NIVELCO becomes ISO 9001 certified NIVELCO Poland is founded
1996	NIVELCO Trade Center NIVOSWITCH – Vibrating fork level switch
1999	NIVOPRESS – Hydrostatic level transmitter
2000	Budapest Factory expansion
2001	NIVOTRACK – Magnetostrictive level transmitter
2002	Standardized mechanical and electronic construction HART® – Digital Communication in transmitters
2003	ATEX Hazardous Area Certificates
2004	MultiCONT – The new system concept NIVELCO Bohemia (Czech Republic) is founded
2005	MicroTREK – Radar-based level transmitter NIVELCO T.M. Company in Romania
2007	NIVELCO Instruments (India) is created
2008	NIVELCO USA is established
2009	AnaCONT – pH, ORP & conductivity transmitter
2010	AnaCONT – Dissolved oxygen transmitter The first SIL product certification
2012	PiloTREK – Non-contact radar level transmitter NIVELCO Mjerna Tehnika d.o.o. (Croatia)
2013	NIVOCAP CK – RF-capacitive level switch
2016	The first FM certificate
2017	EasyTREK SP-500 UNICOMM HART®-USB / Bluetooth® modem
2018	NIPRESS – product family is expanded
2019	Planar antenna version of PiloTREK
2020	NIVOTRACK – Magnetostrictive integrated level transmitter
2021	Redesigned aluminum housings Introduction of ISO 14001 MicroTREK HT-700
2022	NIVOFLIP MAK–200 level switch EasyTREK SP–500 Pro level transmitter
2023	PiloTREK W–200 non-contact, 80 GHz (W-band) radar MobileEView – Configuration App
2024	MonoCONT – Smart Field Controller & Display NIVOPRESS NBB – Detachable submersible hydrostatic level transmitter

TIMELINE

Efficient industrial production depends on the information provided by high-tech sensors and instrumentation. In the 1980s, the entire sensor manufacturing industry was radically changed by developments in microprocessors and electronics. **NIVELCO** acquired a significant market share, which it maintains by utilizing these developments.

Recognizing the growth in market demand, **NIVELCO** earned recognition primarily with its level transmitters and gained substantial global market share due to its pragmatic business practices and continuous investment in new technologies.

For years, **NIVELCO** has been producing every 20th ultrasonic transmitter sold globally, every 50th vibrating level switch, and every 100th radar level transmitter.

NIVELCO has established and maintained a respectable position in the world market, and has sold more than 1 million units of level measuring and control instrumentation so far: NIVELCO is now one of the largest producers of ultrasonic level transmitters in the world.

HEADQUARTERS

From cramped beginnings in 1982, with only 15 employees occupying 150 m² in Budapest, **NIVELCO** has invested in extensive facilities capable of total control of production requirements. In the year 2000, further expansion to a new building complex of 10,000 m² provided ample space for future development, currently allocated for the **NIVELCO** Trade Center and associated activities. Air-conditioned offices, excellent working conditions, and a relaxed environment ensure exceptional productivity and harmonious coexistence on the premises. Unused office space in the **NIVELCO** Trade Center is leased to various other companies. While the engineering and production departments are located in Hungary, **NIVELCO**'s foreign subsidiaries handle sales and marketing activities, consulting, installation, and maintenance in their respective areas.

ADVANCED MANUFACTURING PROCESSES

NIVELCO invests considerable energy and costs in the continuous development of production technology. The production of high-tech instruments is supported by production preparation and logistics by a self-developed IT system. Quantitative and qualitative requirements are met by a technologically advanced CNC machine and surface-mounted electronic technology. The reliability of the equipment produced is guaranteed by climatic treatment and testing, computer control, the ISO 9001 quality control system (1995), and the complementary TQM/EFQM quality model implemented a few years ago. In addition, our environmental management program is fully compliant with ISO 14001 (2021) standards.

SALES & SUPPORT

Providing exemplary technical and sales support to customers, contractors, and distributors has always been an essential part of NIVELCO's approach. The application of knowledge and experience amassed by the sales team is one of the company's strongest suits. Input from the Hungarian sales team, NIVELCO's subsidiaries in Poland, the Czech Republic, Romania, India, the USA, Croatia, and Greece, as well as from export distributors and sales agents, is treated as a valuable resource to be shared and to guide product planning and development. The company publishes numerous articles, application stories, reference site information on the website, and twice a year in NIVELCO Magazine to share this experience with sales agents and distributors. In addition, frequent training courses in the Budapest training center provide customers, installers, and distributors with hands-on experience.

CORPORATE COMMUNICATION

The corporate PR team produces all marketing materials such as brochures, advertisements and presentations for the subsidiaries to represent the unified NIVELCO corporate identity. They manage the NIVELCO website and Selector, and are also responsible for updating downloadable brochures and technical documentation. They also produce our product videos (available on YouTube) to showcase our product portfolio, manufacturing capabilities and wide range of applications. The team is also responsible for managing our online and social channels (web, Facebook, LinkedIn, Instagram, YouTube, NewsLine), attending trade shows and organizing conferences and training sessions for all partners.

edge, share information, and exchange ideas. Dealers attending international trade shows are provided with working models, display accessories, and expert advice. Encouraged by the success of our non-European subsidiaries (USA and India), the company is determined to establish more subsidiaries shortly.

RESEARCH & DEVELOPMENT

The general objective of **NIVELCO**'s Research and Development department is the continual improvement of all products and technologies, including mechanics, hardware, and software, and to design new products that meet the requirements of our customers. R&D is also tasked with devising new ways to continuously modernize and optimize our entire product line, to improve the quality and elegance of designs.

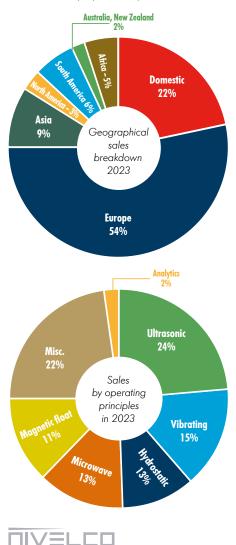

To create an incomparably versatile product portfolio that provides suitable solutions for even the most peculiar industrial problems, the team has to face the most rigorous approval procedures, such as ATEX or PED, and emerge victoriously from measurement accuracy and performance certificates like OIML, GOST, or SIL. In these procedures, close co-operation has been established between NIVELCO and international certification institutions like BKI, TÜV, DNV, BV, and OMH.

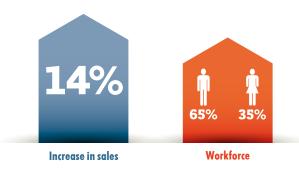

We aim to create sophisticated devices that are thoroughly tested, operate according to specifications, and are sold at competitive prices. **NIVELCO** maintains close ties with academia and suppliers to utilize the most advanced developments available. Strong work relations have been established with Budapest University of Technology and Economics, with Óbuda University, and other academic institutions, which led to recruiting numerous young and well-trained engineers.

COMPANY STATISTICS

NIVELCO, since its establishment, has demonstrated consistent growth, marked by a steady rise in production, turnover, company value, and employee numbers. In the past five years alone, we have invested over 3 million Euros in technological and infrastructure advancements, funded entirely by our net profits. With a robust equity ratio of 72% on the liabilities side of our balance sheet, our financial stability is clear.

Domestically, 22% of our products find their market, while our international sales have shown remarkable progress. Our foray into the global arena began in 1990 with the introduction of ultrasonic level transmitters. This initial step has evolved into a systematic and market-responsive product development strategy, leading to an array of advanced products that now form a significant portion of our sales.

NIVELCO's global presence has been growing since we first entered the international market in 1990 with our pioneering ultrasonic level transmitters. Our approach to product development is both systematic and driven by market needs, resulting in a diverse portfolio of sophisticated equipment. A substantial 76% of our products are sold across Europe, and we are continuously expanding our overseas footprint.

Building on this foundation, NIVELCO has solidified its reputation as a globally recognized player in the process control industry. Our commitment to innovation is evident in our extensive product line, which has expanded beyond the original ultrasonic level transmitters to include a range of sophisticated instruments. This diversification is in line with our strategic goal of providing comprehensive solutions to a wide range of industrial challenges.

REFERENCES

IN NEARLY ALL INDUSTRIES AND ALMOST EVERYWHERE IN THE WORLD

Our devices are used extensively in nearly all industries that involve level measurement and control, including the manufacture and processing of industrial machinery, raw materials, oil, cement, sand, food and beverages, pharmaceuticals, chemicals, clean water, and sewage. There is a virtually endless number of possible applications. Please read about our successful applications sorted by industries, devices, and operation principles on our website.

page 15

page 31

page 40

Since its foundation, NIVELCO has been manufacturing industrial measuring devices. Our primary focus remained the same, and the company developed a plethora of instruments of various operating principles over the decades. Our range of ultrasonic level transmitters is one of the widest on the market, offering a remarkable number of integrated, compact, 2 and 4-wire transmitters for liquids and solids.

Most of our transmitters are available in PFA-coated versions for aggressive mediums; all transmitter families have explosion-proof models for hazardous environments.

PiloTREK NON-CONTACT MICROWAVE

MicroTREK **GUIDED MICROWAVE**

- 2-wire compact transmitter
- TDR principle

transmitters

ε_r > 1.9 IP67 or IP68

 Accuracy up to ±2 mm Configuration via Bluetooth[®] Up to 25 bar and +180 °C 4...20 mA + HART[®] communication

Explosion-proof variants

- ±5 mm or ±20 mm accuracy
- **E**_c > 1.4
 - Measuring range up to 30 m
 - 4...20 mA + HART[®] communication

• 80 GHz (W-band) or 25 GHz (K-band) 2-wire compact and integrated

- Up to 40 bar and +200 °C
- Rod, cable, or coaxial probe
- Plug-in graphic display module
- Explosion-proof variants

NIVOCAP CAPACITIVE

- 2-wire compact transmitter
- Rod or cable probe up to 20 m
- ε, > 1.5
- Partially or fully insulated probe
- 32-point linearization
- High sensitivity
- 4...20 mA + HART[®] communication
- Explosion-proof variants

NIVOPRESS D HYDROSTATIC

page 45

- 2-wire compact level transmitter
- 0...400 bar
- High overload capability
- Accuracy: 0.25%
- Stainless steel diaphragm
- Plug-in display module
- 4...20 mA + HART[®] communication
- Explosion-proof variants

NIVOPRESS N SUBMERSIBLE HYDROSTATIC

NEW

page 48

- 2 or 3-wire submersible transmitter
 - Stainless steel or fully plastic body
 - Up to 350 m measuring range
 - 4...20 mA + HART[®] communication
 - Linearity error: 0.25%
 - Integrated Pt100 temperature sensor
 - Venting tube in cable
 - Detachable variants
 - IP68
 - Explosion-proof variants

NIVOTRACK MAGNETOSTRICTIVE INTEGRATED

- 1 mm resolution
- Distance and level measurement Normal and mini rigid guide tube
- versions
- Stainless steel or titanium floats IP65
- HART[®] communication
- Chemicals, solvents, hydrocarbons
- Tank level monitoring
- Interface measurement

NIVOTRACK MAGNETOSTRICTIVE COMPACT

page 59

page 54

- 2-wire compact or mini compact transmitter
- 0.1 mm or 1 mm resolution
- Maximum 15 m measuring range
- For liquids with min. 0.4 kg/dm³ density
- Distance, level and volume measurement
- Rigid or flexible probe
- OIML R 85 certificate
- Explosion-proof variants

NIVOFLIP **BYPASS LEVEL INDICATORS**

- Operation without power supply
- 500...5500 mm measuring range
- ±10 mm accuracy
- Stainless steel or titanium float
- Optional strap-on level switches
- Maximum 100 bar process pressure
 - **DIN and ANSI flanges**
- High-temp. version up to +250 °C
- PED certified
- Explosion-proof

EasyTREK for liquids ULTRASONIC INTEGRATED

For liquid level measurement

- 2-wire integrated transmitter
- Narrow, 5° beam angle
- Maximum 25 m measuring range
- PP, PVDF, PTFE transducers
- 32-point linearization
- 4...20 mA + HART[®] communication
- Open-channel flow metering
- IP68
- Explosion-proof variants

EchoTREK for liquids ULTRASONIC COMPACT

- Plug-in display module
 - 4...20 mA + HART[®] communication
 - IP67
 - Explosion-proof variants

EasyTREK for solids ULTRASONIC INTEGRATED

- For free-flowing solids
- 4-wire integrated transmitter
- Narrow, 5° beam angle
- Maximum 60 m measuring range
- PP or aluminum sensor
- Joystick aiming device
- 4...20 mA + HART[®] communication
- IP65
- Explosion-proof variants

EchoTREK for solids ULTRASONIC COMPACT

page 94

page 91

- For free-flowing solids
- 4-wire compact transmitter
- Narrow, 5° beam angle
- Maximum 60 m measuring range
- PP or aluminum sensor
- Joystick aiming device
- Plug-in display module
- 4...20 mA + HART[®] communication
- IP65
- Explosion-proof variants

page 75

page 82

- For liquid level measurement
- 2 and 4-wire compact transmitter
- Narrow, 5° beam angle
- Maximum 25 m measuring range
- PP, PVDF, PTFE and SS transducers
- 32-point linearization

NEW Integrated Non-Contact Microwave Level Transmitters

FEATURES

- 2-wire 80 GHz (W-band) radar
- Measuring range up to 30 m for liquids
- Accuracy of ±2 mm
- Easy to install due to small antenna diameter
- 1", 1½" encapsulated horn antenna
- Integrated design with IP68 protection
- User-friendly threshold management
- Configuration via Bluetooth® with MobileEView app
- PACTware[™] compatible
- Ex variant

APPLICATIONS

- For measuring the level of liquids, emulsions, and other media
- For large-particle bulk solids
- Storage tanks, chemical tanks, open pits, sumps, wells
- Measurement through a plastic tank roof
- For material prone to vapor formation
- For measuring liquids with a gas blanket
- It can also be used in a vacuum
- Open-channel flow measurement

CERTIFICATES

- ATEX (Ex ia GD)
- IECEx (Ex ia GD)

AREAS OF APPLICATION

- Water and wastewater industry
- Energy industry / Plant utilities
- Food & Beverage
- Pharmaceutical industry
- Chemical industry
- Marine applications
- Agriculture
- Construction materials
- Heavy industry
- Packaging industry

WPA-212-4

The new **PiloTREK WP-200** non-contact radar level transmitters use the most advanced industrial measurement technology, the 80 GHz FMCW radar. The most fundamental advantage of 80 GHz radars compared to lower frequencies (5...12 GHz and 25 GHz) is the smaller antenna size, better focusability, and narrow beam angle.

It uses the latest technology for measuring liquids, masses, emulsions, and other chemicals widely used in, for example, the water industry, food industry, energy industry, pharmaceutical industry, and chemical industry, which provides measurement results with millimeter accuracy. It is also excellent for measuring substances prone to vapor formation and liquids with gas blanket or large-particle bulk solids. In addition to the level, volume, and weight measurement functions, this product family also inherits the open-channel flow measurement functions and the threshold functions to eliminate false and interfering echoes. Since no medium is required for millimeter waves to propagate, it can also be used in a vacuum. The device can also be operated with HART[®] compliant NIVELCO EView2, MultiCONT universal process controller, and PACTware[™] software, or programmed via Bluetooth[®] communication with the new MobileEView app.

OPERATING PRINCIPLE

The reflection of the millimeter-waves is highly dependent on the dielectric constant of the medium. Therefore, the measured medium's dielectric constant (\mathcal{E}_r) must be over 1.9 for millimeter-wave level measurement. The measurement principle of a level transmitter with a millimeter-waves signal is based on measuring the reflection's time of flight.

The speed of propagation of millimeter-waves signals in the air, gases, and vacuum is almost constant regardless of temperature and medium pressure, so the measured distance does not depend on the physical parameters of the intermediate medium.

The **PiloTREK WP-200** level transmitter is a continuous-wave frequency modulated radar (*FMCW*) operating at 80 GHz (*W-band*). The most obvious advantages of 80 GHz radars over lower frequency (5...12 & 25 GHz) radars are smaller antenna size, better focus, and smaller beam angle. A portion of the millimeter-wave continuous wave energy radiated by the level transmitter antenna is reflected from the measured surface, depending on the material to be measured. The distance of the reflecting surface is calculated with high accuracy by the electronics from the frequency shift of the reflected signal and converted into a distance, level, or volume signal by the electronics.

HART® MULTIDROP LOOP

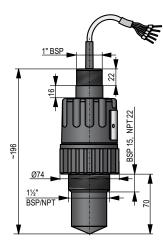

MultiCONT multichannel process controllers process and display measurement data supplied by NIVELCO's HART® equipped transmitters in a Multidrop loop. Connected transmitters can be programmed through **MultiCONT**, and it can also perform data logging tasks. Processed data may be sent to a computer via RS485 and displayed in **NIVISON**. **MultiCONT** provides the means to optimize and configure measurements and display the echo maps of the particular installations.

NEW

Compact Non-Contact Microwave Level Transmitters

FEATURES

LEVEL TRANSMITTERS

- 2-wire 80 GHz (W-band) radar
- Measuring range up to 30 m for liquids
- Accuracy of ±2 mm
- Easy to install due to small antenna diameter
- Plug-in graphic display module
- Horn and plastic encapsulated antennas
- IP67 protection
- User-friendly threshold management
- Configuration via Bluetooth[®] with MobileEView app
- PACTware[™] compatible
- NIFLANGE weldable stainless steel flange variants
- Ex variant

APPLICATIONS

- For measuring the level of liquids, emulsions, and other media
- For large-particle bulk solids
- Storage tanks, chemical tanks, open pits, sumps, wells
- Measurement through a plastic tank roof
- For material prone to vapor formation

- For measuring liquids with a gas blanket
- It can also be used in a vacuum
- Open-channel flow measurement

CERTIFICATES

- ATEX (Ex ia GD)
- IECEx (Ex ia GD)

AREAS OF APPLICATION

- Water and wastewater industry
- Energy industry / Plant utilities
- Food & Beverage
- Chemical & pharmaceutical industry
- Agriculture
- Construction materials
- Heavy industry
- Packaging industry

WES-212-4

WES-214-4

The new **PiloTREK WE-200** non-contact radar level transmitters use the most advanced industrial measurement technology, the 80 GHz FMCW radar. The most fundamental advantage of 80 GHz radars compared to lower frequencies (5...12 GHz and 25 GHz) is the smaller antenna size, better focusability, and narrow beam angle. It uses the latest technology for measuring liquids, masses, emulsions, and other chemicals widely used in, for example, the water industry, food industry, energy industry, pharmaceutical industry, and chemical industry, which provides measurement results with millimeter accuracy. It is also excellent for measuring substances prone to vapor formation and liquids with gas blanket or large-particle bulk solids. In addition to the level, volume, and weight measurement functions, this product family also inherits the open-channel flow measurement functions and the threshold functions to eliminate false and interfering echoes. Since no medium is required for millimeter waves to propagate, it can also be used in a vacuum.

The device can also be operated with HART[®] compliant NIVELCO **EView2**, **MultiCONT** universal process controller, and PACTware software, or programmed via Bluetooth[®] communication with the new **MobileEView** app.

OPERATING PRINCIPLE

The reflection of the millimeter-waves is highly dependent on the dielectric constant of the medium. Therefore, the measured medium's dielectric constant (\mathcal{E}_r) must be over 1.9 for millimeter-wave level measurement. The measurement principle of a level transmitter with a millimeter-waves signal is based on measuring the reflection's time of flight. The speed of propagation of millimeter-waves signals in the air, gases, and vacuum is almost constant regardless of temperature and medium pressure, so the measured distance does not depend on the physical param-

eters of the intermediate medium.

The **PiloTREK WE–200** level transmitter is a continuous-wave frequency modulated radar (*FMCW*) operating at 80 GHz (*W-band*). The most obvious advantages of 80 GHz radars over lower frequency (5...12 & 25 GHz) radars are smaller antenna size, better focus, and smaller beam angle. A portion of the millimeter-wave continuous wave energy radiated by the level transmitter antenna is reflected from the measured surface, depending on the material to be measured. The distance of the reflecting surface is calculated with high accuracy by the electronics from the frequency shift of the reflected signal and converted into a distance, level, or volume signal by the electronics.

Non-Contact Microwave Level Transmitters

PiloTREK W-100

The 25 GHz (K-band) PiloTREK W-100 Pulse Radar is regarded as one of the most progressive non-contact level transmitters in industrial process automation. It is superbly accurate, and its small antennas make installation simple and costeffective. NIVELCO's K-band radar features ±3 mm accuracy and short dead band; its versatile casing is available in plastic, aluminum, or stainless steel. The choice of antennas includes stainless steel parabolic and stainless steel horn with an optional plastic tube enclosure. Antennas can be replaced safely in the enclosure without removing the enclosure itself, thus preventing any leaks. A plug-in display module aids the local programming of PiloTREK. If on-site reading is not required, the unit may be ordered without a display module, further reducing the cost. The signal processing algorithm of PiloTREK is the product of NIVELCO's 40 years of experience in non-contact level measurement, making it an excellent choice for simple and complex applications.

FEATURES

- 2-wire K-band Pulse Burst Radar
- 25 GHz frequency
- Up to 23 m measuring range for liquids and slurries
- ±3 mm accuracy
- Easy installation due to small antennas
- Parabolic, horn and enclosed antennas
- IP68 rated integrated variant
- NIFLANGE weldable stainless steel flange variants
- Sanitary versions for strict hygiene requirements
- High-temperature version
- Plug-in graphic display module
- PACTware[™] compatible

When choosing your device, consider the more advanced W-200 Series, which allows you to work more cost-effectively and accurately.

Liquids and slurries in general

OPERATION

The operation of non-contact microwave level transmitters is based on measuring the travel time of electromagnetic waves. The speed of electromagnetic waves is practically unchanged within the applicable ranges of temperature and pressure; therefore, measurement data is also unaffected by these factors. Level transmitters emit microwave impulses for nanoseconds from the antenna, and the measured surface reflects part of the signal. Measuring the level of a specific medium depends on the reflected signal's strength, which depends heavily on the measured distance, the relative dielectric constant (\mathcal{E}_r) of the measured medium, and the waviness of its surface. The relative dielectric constant of mediums must exceed 1.4 when using units equipped with parabolic antennas, and 1.9 with horn antennas.

(1) Under reference reflection conditions (as per EN 61298-3, in an interference-free environment, from a minimum 10 m² target surface) and constant temperature. Plastic antenna enclosures decrease the maximal measuring range by 10% (PTFE) or 20% (PP).

(2) Certain factors (e. g. disturbing reflections, steam or gas condensation, EMC noises) might decrease the maximal measurement by 50%.

⁽³⁾ Dielectric constant (Er) of liquids at rest.

 $^{(4)}$ Dielectric constant (ϵ r) of liquids used in process tanks or where the liquid's surface is not at rest.

POLARIZATION

PiloTREK non-contact level transmitters emit linearly polarized microwave impulses. The polarization plane of the emitted impulses can be rotated fully in the case of $W\square S$, $W\square M$ and the $W\square K$ types. Rotating the polarization plane can minimize false reflections from interfering objects or the tank wall. The orientation of the polarization plane coincides with the line drawn between the cable glands.

BACKGROUND MAPPING

Background mapping provides an excellent remedy for unwanted reflections from (*stationary*) interfering objects. The device takes a snapshot of the empty tank, and creates a reference image of its surface. This snapshot enables the measurement evaluation software of **PiloTREK** to recognize and ignore any false reflections automatically.

PROGRAMMING, ECHO MAP

All parameters can be programmed via the SAP-300 plug-in display; measurement and output parameters can be adjusted in a text-based menu system.

Measured values are displayed in numbers and bar-graphs on the dot-matrix screen. Echo Map helps to detect false reflections and optimizes measurement configuration.

MOUNTING

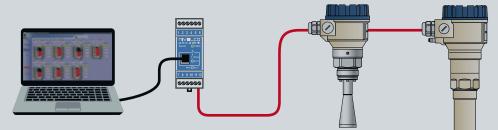

The device must not be mounted in the middle of the tank or the inlet's proximity or the tank's outlet to avoid unwanted multiple reflections. P:L-TREK (0.3. 0.5) The idea ition a the tank walls must be at lea interference, such 20 ist be i unte ta cts side he ce. in teri as wave ument must be at he

protected from direct sunlight to avoid overheating.

PC CONNECTION

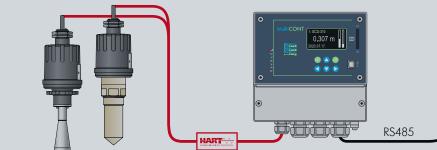

HART® output devices and a UNIC MM S/ PC via a wire, while using a UNICOMM

SAT-504 HART®-USB/Bluetooth® modem, the transmitters can be connected via Bluetooth®. All measured values can be visualized on the PC screen and the instruments can be programmed remotely via HART® modem. Up to 15 (non-Ex) instruments can be connected to a single HART® loop. Applicable software: EView2 configuration software or NIVISION process visualization software.

PiloTREK TRANSMITTERS IN HART® MULTIDROP LOOP

The MultiCONT can handle digital data coming from HART® capable NIVELCO transmitters (e.g. level, temperature, pressure, pH, dissolved oxygen, etc.). The digital (HART®) information is processed, displayed and transmitted via RS485 communication line to a PC when needed. Remote programming of the transmitters is also possible. Visualization on PC can be accomplished with NIVISION process visualization software.

WHS-115

Guided Microwave Level Transmitters

Our newly developed MicroTREK HT-700 guided microwave level transmitter is designed for the continuous level measurement of conductive and non-conductive liquids, pulps, and solids. The measuring speed of the new MicroTREK HT-700 is almost ten times that of its predecessor, the HT-700's measuring dead zone is significantly smaller, and its maximum measuring distance is longer! Furthermore, the supply voltage range of the device has been expanded. Its level gauge operates based on measuring the travel time of impulse reflections (TDR – Time Domain Reflectometry). The electronic module generates microwave impulses in the sensor, which travel at the speed of light.

Part of the impulse energy is reflected from the surface depending on the material. The reflected signal's travel time is measured and processed by the module's electronics, and then it is converted to a volume- and level-proportional signal. Reflections depend heavily on the medium's dielectric constant (\mathcal{E}_r), which must be at least 1.4 for successful measurement. The propagation speed of microwave impulses in a vacuum, air, and other gases is virtually the same; distance measurement is therefore independent of the medium within the given limits.

FEATURES

- Measuring range up to 30 m
- Tracking speed: 900 m/h (= 25 cm/s)
- Accuracy: ±5 mm
- Measurement is independent of medium's dielectric constant, temperature, pressure and density
- Rod, cable, or coaxial probe
- Segmented rod probe version
- Lowest $\varepsilon_r \ge 1.4$
- Interface measurement (coming soon)
- Graphic display
- Advanced threshold management
- False echo suppression
- Probe Correction Table (SCT)
- PACTware[™] compatible
- 4...20 mA + HART[®] output + relay (optional)
- Process temperature range: -30... +200 °C
- Highest process pressure: 40 bar
- IP67
- 5 years warranty

CERTIFICATES

- ATEX (Ex ia G)
- ATEX (Ex ia D)
- ATEX (Ex ta/tb D)
- IEC Ex (Ex ia G)
- IEC Ex (Ex ia D)
- INMETRO (Ex ia G)

APPLICATIONS

Mono cable / Mono rod Mono segmented rod	Twin cable	Twin rod	Coaxial pipe
 Cement, limestone, fly ash, alumina, soot All high-viscosity liquids Mineral powders Clean and contaminated liquids For stilling wells (calibration required) With plastic-coated probe for aggressive substances Slightly conductive foams High-temperature applications Bypass applications 	 Tank parks with solvents, oil and fuels Water storage tanks Plastic granules For products with low dielectric constant (<i>E</i>_r > 1.8) For any liquids, light granules For narrow tanks Where minimum dead zone is needed Mounting close to tank wall is possible 	 Plastic granules Coated tanks Clean and contaminated liquids Fine powders Where minimum dead zone is needed For narrow tanks For mediums with low dielectric constant and slightly moving products 	 Small vessels and tanks up to 6 m tall Solvents, liquefied gases LPG, LNG For clean liquids with low dielectric constant Agitated or flowing liquids – the probe acts as a stilling well Liquid or vapor spray near the probe Can be heated Contact possible with metallic object or tank wall Where no dead zone allowed

TECHNICAL DATA

	Version	Plastic housing	Aluminum housing	Stainless steel housing				
Measured values / calculated values		Distance, level; / Volume, Weight						
Measuring range		Depending on probe version and dielectric constant (Er) of the medium						
Probe vers	ions	Mono cable, twin cable, mono rod, twin rod, coaxial pipe, segmented coaxial pipe and segmented rod						
Accuracy	Linearity error ⁽¹⁾	For liquids: ±5 mm, if probe length ≥ 10 m: ±0.05% of the probe length. For solids: ±20 mm, if probe length ≥ 10 m: ±0.2% of the probe length						
,	Resolution	lmm						
owest Er o	of medium		1.4 (depending on probe version)					
Supply vol	ltage	12 ⁽³⁾ 36 V DC, nominal 2	4 V DC, Ex version: 12 ⁽³⁾ 30 V DC, tran	sient overvoltage protection				
	Communication		420 mA + HART®					
Output	Display (optional)	SAP–300 graphic display unit						
	Relay (optional)	SPDT 30 V / 1 A DC; 48 V / 0.5 A AC						
	mperature	−30+90 °C; high-temperature version: −30+200 °C						
IOCESS IEI	mperature	For plastic-coated probes, coated: see "Probe Properties"						
Highest pr	ocess pressure	40 bar (4 MPa); with plastic lined flange: maximum 25 bar (2.5 MPa)						
Ambient te	emperature	−30+65 °C, with display: −20+65 °C						
^o rocess co	onnection	Threaded, flanged or sanitary connections (as per order code)						
ngress pro	otection	IP67						
Electrical a	connection	2× M20×1.5 cable glands + 2× internally threaded ½" NPT connection for protective pipes, cable outer diameter: Ø6Ø12 mm, wire cross section: maximum 1.5 mm²						
Electrical protection		Class III						
Housing m	naterial	Plastic (PBT)	Painted aluminum	Stainless steel (KO35)				
Seal		FP	M (Viton®), optional: FFKM (Kalrez®), EPD	DM				
Explosion protection		_	— See "Ex Information"					
Weight (head unit)		1.3 kg	2.2 kg	3.9 kg				
		(0)						

⁽²⁾ The use of SAP-300 graphic displays is limited in hazardous environment. For further information, see "Ex Information". $^{\left(1\right) }$ Under reference conditions and constant temperature. $^{\scriptscriptstyle (3)}$ In an industrial environment, reliable operation can be guaranteed with a terminal voltage >13 V.

⁽⁴⁾ Ex ta D protection class devices are available only with a windowless cap.
 ⁽⁶⁾ IEC Ex compliance is optional; must be requested in the order.

 $^{(5)}$ In IIC environment SAP-300 graphic display must not be used! $^{(7)}$ In an industrial environment, reliable operation can be guaranteed with a terminal voltage >13 V.

MEASURABILITY OF THE MEDIUM

The measurability of the medium and the reflected signal strength depends on the relative dielectric constant of the medium.

Informative \mathcal{E}_r values						
Butane	1.4	Grain	35			
Cement	1.510	Cooking oil	3.9			
LPG	1.61.9	Limestone	6.19.1			
Kerosene	1.82.1	Acetone	21			
Crude oil	2.1	Ethanol	24			
Diesel oil	2.1	Methanol	33.1			
Gasoline	2.3	Glycol	37			
Asphalt	2.6	Nitrobenzene	40			
Clinker	2.7	Water	80			
Resin	2.43.6	Sulphuric acid (T = 20 °C)	84			

PROBES

Reliable measurement with microwaves depends on selecting the appropriate probes and taking the medium's properties and other vessel conditions into consideration.

			Max.	Dead zone ⁽¹⁾		
Probe	ε _{r min.}	Process connection	measuring range	Upper (t) / lower (b) E _r = 80	Upper (t) / lower (b) E _r = 2.4	
Mono cable Ø4 mm		1"; 1½"	20		350 mm / 100 mm	
Mono cable Ø8 mm	2.1	11⁄2"	30 m	250 mm / 20 mm		
Mono rod Ø8 mm	2.1	ן "	3 m			
Mono / segmented rod Ø14 mm			6 m

Capacitive Level Transmitters

NIVOCAP 2-wire capacitive level transmitters are an ideal solution for level measurement of conductive and non-conductive liquids. The instrument's probe and the reference probe (which can be either the metal wall of the tank or a separate probe) operate as opposing plates of a capacitor. Between the plates of this capacitor, the air is replaced by a medium with a higher dielectric constant, changing the capacitance proportionally to the material's level. The incorporated electronic circuitry measures the capacitance difference and converts it to an output signal.

> Level and volume measurement Level measurement of conductive and

non-conductive materials

APPLICATIONS

FEATURES

- Maximum 20 m measuring range
- Vertical mounting
- Rod or cable probe versions
- -30...+200 °C process temperature
- Up to 40 bar process pressure
- 32-point linearization table
- Indirect assignment of 0% and 100%
- IP67
- 4...20 mA + HART[®] output
- PACTware[™] compatible
- Ex version
- 5 years warranty

SELECTING THE APPROPRIATE PROBE

The device uses the capacitive operating principle; therefore, if the dielectric constant of the measured material changes or it is too low, or the wrong probes are selected for the job, measurement accuracy will suffer.

Hydrostatic Level Transmitters

LEVEL TRANSMITTERS

NIVOPRESS D level transmitters operate in 2-wire systems that convert the relative pressure (*input signal*) into a direct current signal (*output signal*). The silicone oil (*cooking oil on request*) transmission fluid transmits the pressure value from the stainless steel diaphragm to the piezoresistive sensor of the transmitter — smart elect onics and HART[®] communication feature local and remote programming. The transmitters are available in standard and non-sparking (*Ex ia*) versions.

Due to their design, the **NIVOPRESS D** front diaphragm level transmitters are particularly suitable for level measuring tasks by measuring pressure at the bottom of the tank. The same design makes it an excellent instrument for food applications (*milk*, pastes). The smooth membrane surface and the maximum permissible process temperature of +125 °C ensure hygienic cleaning in technologies that require regular cleaning and eliminate the risk of clogging. The device can be used for all level measurement tasks with atmospheric pressure above the liquid column.

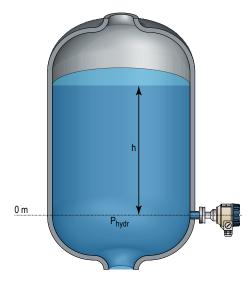

FEATURES

- 0.25% accuracy
- Gauge or absolute pressure transmitter
- Piezoresistive sensor with stainless steel flush diaphragm
- Wide pressure range
- Temperature compensation
- HART[®] communication
- PACTware[™] compatible
- Plug-in display
- Wide variety of process connections
- IP65
- Ex version
- 5 years warranty

OPERATION

Hydrostatic level measurement principle

Provided the density is constant, the level depends on the pressure head.

APPLICATIONS

- Liquids in tanks and vessels
- Chemicals with dense vapor or gas layers above the surface
- Foaming liquids
- Highly viscous and corrosive substances

CERTIFICATES

HART® MULTIDROP LOOP

MultiCONT multichannel process controller can handle up to 15 normal HART® or up to 4 Ex-proof HART® capable NIVELCO transmitters. Digital (HART®) information is processed, displayed, and if necessary, transmitted via RS485 to a computer. Remote programming of the transmitters is also possible. Processes can be visualized on computers by using NIVISION.

COMPUTER CONNECTION

HART® output devices and a UNICOMM SAK-305 HART-USB modems can be connected to a PC wired, while using a UNICOMM SAT-504 HART-USB/Bluetooth® modem, the transmitters can be connected via Bluetooth®. All data measured by the NIVOPRESS D can be displayed on the PC, and the devices can be reprogrammed if required. For a HART® modem, a maximum of 15 standard transmitters can be connected. In addition, the EView2 configuration or NIVISION process visualization software can also be used.

NEW Submersible Hydrostatic Level Transmitters

.EVEL TRANSMITTERS

NIVOPRESS N submersible hydrostatic level transmitters are designed to measure the level of clean and contaminated liquids. The pressure sensor at the end of the probe measures the sum of the hydrostatic pressure (P_{hydr}) of the liquid column above and the atmospheric pressure (P_{atm}) . Atmospheric pressure is channeled to the sensor through a breathing capillary equipped with a moisture filter that prevents moisture from damaging the electronics. The atmospheric pressure is subtracted from the overall measured pressure to get the hydrostatic pressure, which is proportional to the height of the liquid column (h), then the sensor's signal is converted into an output signal. If both the level and the temperature of the liquid needs to be measured, a combined (level & temperature) transmitters are available. There is a wide variety of accessories for the transmitters.

The new NBB-400 separated head unit versions are particularly ideal for marine applications such as ships and floating docks. The separated head design allows for quick sensor replacement without the need for complex wiring disassembly, minimizing downtime and technical maintenance.

A sewage adapter operating on the diving bell principle can be snapped into the protective cap's place to avoid the direct contact between the sensor and the measured contaminated liquid. A mechanical filter is built into NZ type transmitters as a measure of extra protection. N-500 devices can be used in hazardous environments. NZ screw-in type transmitters are recommended for applications where there is a risk of flooding. NB/NG plastic housing types are designed for those applications where aggressive mediums (e. g. saline solutions or seawater) may corrode stainless steel.

FEATURES

- Measuring range up to 350 m
- Remotely programmable
- IP68
- Submersible or screw-in versions
- Ø22 / Ø24 mm tube
- HART[®] communication
- PACTware[™] compatible
- 2 or 3-wire versions
- Ex versions
- 2× 4...20 mA output (level + temperature)
- Built-in Pt100 temperature sensor
- Overvoltage and inverse polarity protection
- Wide range of accessories
- Detachable variants
- Approved for potable water
- Available with capacitance ceramic, piezorezistive stainless steel or ceramic sensor
- 5 years warranty

NZ / ND

NZ / ND + NAZ-103 sewage adapter

1.

LEVEL TRANSMITTERS

APPLICATIONS

- Level and temperature measurement of potable water wells, tanks, pools
- Submersible pump control
- Screw-in submersible version with IP68 protection for applications with risk of flooding
- Clean or slightly polluted, contaminated liquids
- Sewage
- Draw-down protection
- Sewage lift station control
- Saline solutions, seawater

CERTIFICATES

- ATEX (Ex ia G)
- UKCA Ex (Ex ia G)

NIVOTRACK MI□–, MX□–, MY□–5□□ magnetostrictive level transmitters are an ideal solution for high-accuracy measurement of clean fluids. Integrating the transmitter into a process control system is easy due to the intelligent signal processing and communication software and the wide range of accessories offered.

OPERATING PRINCIPLE

The float, containing a magnetic disc, moves along the stem with a magnetostrictive wire in it. A pulse generated by the electronics travels along the magnetostrictive wire. When the pulse reaches the float's magnetic field, torsion develops. Reflected from the torsion point, the pulse creates an acoustic wave, which travels back along the wire. The transmitter's 4...20 mA output is proportional to the time between the excitation and detection.

FEATURES

- 2-wire integrated transmitter
- 1 mm resolution
- Distance and level measurement
- Standard and mini versions
- Stainless steel or Titanium floats
- IP65
- HART[®] communication
- Level monitoring of tanks
- Interface measurement
- 5 years warranty

APPLICATIONS

- Level measurement of liquids, with min. 0.4 kg/dm³ density
- Chemical industry
- Power plants
- Oil industry
- Water industry
- Chemicals, solvents, hydrocarbons

Magnetostrictive Compact Level Transmitters

NIVOTRACK magnetostrictive level transmitters are an ideal solution for high-accuracy measurement of clean fluids. Their level of precision makes them an excellent choice for the custody transfer measurement of liquids such as fuels, solvents, and alcohol derivatives. Flexible tube units make accurate measurements possible in tanks as high as 15 meters. Models with plastic coating can be used with aggressive materials. Integrating the transmitter into a process control system is easy due to the intelligent signal processing and communication software and the wide range of accessories offered.

FEATURES

- 0.1 mm or 1 mm resolution
- Insertion length up to 15 m
- Compact model
- Rigid or flexible guide tube
- Plastic-coated version for chemicals
- 4...20 mA and HART® output
- Graphic display
- 99-point linearization table
- Measurement optimization
- Volume measurement
- PACTware[™] compatible
- Interface measurement
- ATEX certified variants
- IP67 (IP68)
- 5 years warranty

APPLICATIONS

- Custody transfer measurement
- Oil, gas and chemical industry (ATG – Automatic Tanking Gauge)
- Fuels and gasoline products
- Pharmaceutical industry
- Alcohols and beverages, food industry

Bypass Liquid Level Indicators

NIVOFLIP is a bypass level indicator for pressurized vessels with up to 5.5 m flange distance containing liquids. The device has the international PED (*Pressure Equipment Directive*) certificate, so it can be used for level indication of pressurized vessels up to 100 bar process pressure. The high-temperature versions are applicable up to +250 °C process temperature. **NIVOFLIP** can be equipped with optional limit switches or with **NIVELCO**'s **NIVOTRACK** high-precision magnetostrictive level transmitter if level transmission is needed.

FEATURES

- Clearly visible display
- Measuring range: 500...5500 mm
- ±10 mm accuracy
- Up to 100 bar process pressure
- High-temperature version
- Aluminum or stainless steel indicator housing
- Bypass measuring chamber version without indicator
- Optional level switches
- Optional magnetostrictive level transmitter
- Explosion-proof
- 5 years warranty

CERTIFICATES

- PED certificate
- ATEX (Ex d e m Gb): MAK-100 level switches
- ATEX (Ex h Ga/Gb): ML-100 bypass level indicator

APPLICATIONS

- Oil & Gas
- Chemical industry
- Power generation
- Boilers
- Pressurized vessels
- Tanks

NIVOFLIP MLD-100 + MAK-100 + NIVOTRACK MDL-500/600

OPERATION

The fluid level in the bypass chamber is the same as in the tank. The welded bypass chamber and the tank form one pressurized system, so the float containing a magnet rises and descends with the fluid level. The properly polarized magnet in the float topples the two-toned plates with the colored magnetic caps through the stainless steel tube's wall, indicating the fluid level. The plates with different color codes on the 100 mm under the lower stem provide a visual error message when fluid levels drop below the instrument's lower connecting point.

NIVOFLIP LEVEL INDICATING SYSTEM

NIVOFLIP bypass liquid level indicator can be equipped with positionable MAK-100/200 external level switches to provide level limit switching. For MAK-100 level switches, the minimal liquid density must exceed the default value specified in the datasheet by 0.1 kg/dm³. For jobs requiring more accuracy than that of the magnetic flaps, high-precision **NIVOTRACK M-500** magnetostrictive level transmitters are recommended to use. Equipped with OIML R 85 certified **NIVOTRACK**, the measurement system is suitable for custody transfer measurements. The floatless rigid probe magnetostrictive transmitter can be mounted externally to the bypass chamber with clamps. All optional units are operated via magnetic coupling, there is no direct contact with the measured material.

PROPERTIES

MAK-100/200 MAGNETIC LEVEL SWITCHES

The MAK magnetic level switches are optional accessories for NIVOFLIP bypass level indicators. The float in the stainless steel bypass tube follows the level of the measured liquid. The float (permanent magnet) operates the positionable MAK-100/200 level switch via magnetic coupling and provides a non-contact signal transfer to the switch. There must be at least 100 mm distance for MAK-100 and 60 mm distance for MAK-200 between two switching points.

NIVOTRACK MOUNTED ON NIVOFLIP

The length of the magnetostrictive level transmitter's probe must be 400 mm longer than the center to center distance of the bypass tube, depending on float version. The level transmitter is placed onto the bypass tube so that the top of the magnetostrictive probe is at the same height as the bypass tube's top. The end of the probe must extend 20 mm / 40 mm farter than the error indication flaps.

The aluminum spacers that come with the level transmitter are held to the probe stem by grub screws, and the assembly is clamped onto the bypass tube. High-temperature versions have ceramic fiber insulator fabric between the bypass tube and the probe of the level transmitter.

The EasyTREK SP-500 Pro series level transmitters embody four decades of NIVELCO's experience in ultrasonic level measurement. EasyTREK devices are IP68 rated, their transducer and processing electronics are incorporated into a single unit. EasyTREK transmitters utilize HART® 7 communication, they can be used in multidrop systems connected to MultiCONT process controller/display, or a PC via a UNICOMM HART®-USB modem or similar. Transmitters can be programmed remotely with Handheld Field Communicator as well; they can be connected wirelessly to a computer via an SAT-504 Bluetooth® HART® modem. The EasyTREK SP-500 Pro devices are smaller in size, their maximum measuring range has been extended, and their minimum measuring range decreased.

APPLICATIONS

- For liquid level measurement, open-channel flow metering
- Wide application area from wastewater to aggressive chemicals
- Level measurement in basins, wells, sumps, lift-stations
- Measuring of hydrocarbons, acids, water-based liquids

FEATURES

- 2-wire integrated transmitter
- Non-contact level measurement
- Can be powered by a 12 V battery
- Maximum 18 m measuring range
- Narrow (5°) beam angle
- Temperature compensation
- HART® 7
- PACTware[™] compatible
- Handheld compatibility
- Advanced threshold management
- Quick start mode
- Faster measurement cycle
- IP68 protection
- PP, PVDF transducer
- Service Interface
- Ex version (pending)
- 5 years warranty

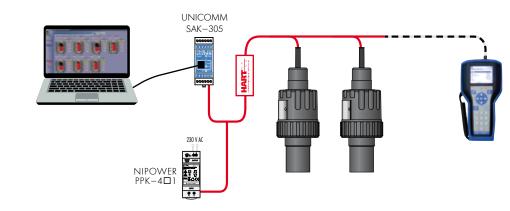

CERTIFICATES

SPA-590

PC CONNECTION

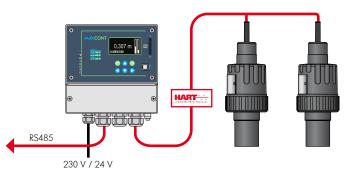

Instruments with HART[®] connectivity can be linked to a PC using a **UNICOMM** SAK-305 HART[®]-USB modem. All measured values of **EasyTREK** level transmitters can be visualized, and the instruments can be remotely programmed via HART[®]. Applicable software for PC: **EView2** configuration tool or **NIVISION** process visualization program.

Bluetooth[®] CONNECTIVITY

Instruments with HART[®] connectivity can be linked to a PC via Bluetooth[®] using a **UNICOMM** HART[®]–USB/Bluetooth[®] modem (SAT–504). The USB power bank connected to the **UNICOMM** modem can power the entire setup.

HART[®] MULTIDROP LOOP

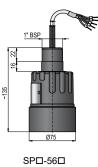

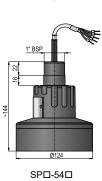

MultiCONT Multichannel Process Controllers process and display measurement data supplied by **NIVELCO's** HART® compatible transmitters in a Multidrop loop. Connected transmitters can be programmed through **MultiCONT**, and it can also perform data logging tasks. Processed data may be sent to a computer via RS485 and displayed in **NIVISON**.

Integrated Ultrasonic Level Transmitters for Liquids

LEVEL TRANSMITTERS

EasyTREK high performance level transmitters embody four decades of NIVELCO's experience in ultrasonic level measurement. Whether measuring the level of sump tanks or open-channel flows, EasyTREK transmitters are the best choice. Installed on the tank's roof or above the liquid's surface, the transmitter produces produces an output signal (analog or HART[®] digital) proportional to the liquid level. The **EasyTREK** is an integrated blind transmitter with equal measuring performance to that of EchoTREK; it is also readable and programmable remotely through HART[®] protocol.

There are two mounting options for **EasyTREK**: a 1½" and a 2" process connection. Its 1" threaded neck facilitates suspending it above the medium, a typical water/wastewater application.

FEATURES

- 2-wire integrated level transmitter
- Non-contact level measurement
- Maximum 25 m measuring range
- Narrow (5°) beam angle
- Full temperature compensation
- IP68
- HART[®] communication
- Ex version
- 5 years warranty

APPLICATIONS

- For most liquids, including flammable liquids
- Open-channel flow metering
- Wide application range from wastewater to aggressive chemicals
- Level measurement in basins, wells, sumps, lift-stations
- Measuring hydrocarbons, acids, aggressive liquids, any water-based mediums

CERTIFICATES

- ATEX (Ex ia G)
- INMETRO (Ex ia G)
- UKCA Ex (Ex ia G)

PROGRAMMING

Instruments with HART® output can be connected to a PC using a UNICOMM HART-USB modem. All measured values can be visualized on the PC screen, and the instruments can be programmed remotely via HART® modem. Up to 15 (non-Ex) instruments can be connected to a single HART® loop. Applicable software: EView2 configuration software or NIVISION process visualization software.

SPA-380-4

Programmable features via HART[®] communication:

- Assign 4 mA to low level
- Assign 20 mA to high level
- Error indication on current value output
- Power relay switch points
- Damping time
- Measurement configuration
 - (Units, function, close-end blocking)
- Measurement optimization (Damping, tracking speed, sound velocity correction)
- Tank contents profiles: 14 different shapes
- Open-Channel Flow Metering: 21 different profiles
- Relay functions (differential, flow pulse etc.)
- 32-point linearization, measurement simulation
- Information / diagnostics (Echo map and signal / noise)

HART® MULTIDROP LOOP

MultiCONT Multichannel Process Controllers process and display measurement data supplied by **NIVELCO's** HART[®] equipped transmitters in a Multidrop loop. Connected transmitters can be programmed through **MultiCONT**, and it can also perform data logging tasks. Processed data may be sent to a computer via RS485 and displayed in **NIVISON**.

SBA-46G-1 (4-wire)

APPLICATIONS

EchoTREK SE-300 high-performance level transmitters embody four decades of NIVELCO's experience in ultrasonic level measurement.Whether measuring the level of sump tanks or open-channel flows, EchoTREK transmitters are the best choice.

Installed on the tank's roof above the liquid's surface, the transmitter produces an analog signal proportional to the liquid's level, transmitted via HART[®]. The EchoTREK is an intelligent compact ultrasonic level transmitter with 4...20 mA output and optional HART® protocol. An optional removable plug-in display provides localized reading. Programming is performed via four buttons, both the display and the buttons have a removable cover. EchoTREK transmitters utilize HART® 7 communication, they can be used in multidrop systems connected to MultiCONT process controller/display or a PC via a UNICOMM HART-USB / RS485 modem or similar. EchoTREK transmitters are available with measuring ranges up to 25 meters, making them fit for a wide range of applications. These ultrasonic level transmitters use NIVELCO's SenSonic range transducers with a full beam angle 5...7 degrees, connected to the intelligent electronics featuring QUEST+ advanced signal processing algorithm.

- For most liquids, including flammable liquids
- Open-channel flow metering
- Wide application range from wastewater to aggressive chemicals
- Level measurement in basins, wells, sumps, lift-stations
- Measuring hydrocarbons, acids, aggressive liquids, any waterbased mediums

OPERATION

Ultrasonic level metering is based on the principle of measuring the travel time of ultrasound pulses from the sensor to the measured surface and back. The reflected signal's time of travel is measured and processed by the electronics, then it is converted to data proportional to distance, level, volume, or flow, considering the tank dimensions or the pre-programmed flume/weir parameters. QUEST+ intelligent signal processing software oversees the measurement and ensures reliable level monitoring.

Ultrasonic Integrated Level Transmitters for Solids

4-wire EasyTREK ultrasonic level transmitters are designed for solids level monitoring, where previously only more complex, two-part systems have performed adequately. SenSonic narrow beam angle transducers offer superb signal transmission, providing the means for EasyTREK units to overcome filling noise, dust, and irregular surface formations. Combined with QUEST+, an advanced adaptive signal processing software, the system offers a solution with world-class performance.

FEATURES

- Non-contact level measurement
- 4-wire integrated (blind) level transmitter
- Maximum 60 m measuring range
- Narrow (5°) beam angle
- Full temperature compensation
- IP65
- HART[®] communication
- Dust Ex variant
- 5 years warranty

APPLICATIONS

- Level, volume and weight calculation
- Wide application range: light powders to coarse bulk solid materials
- Reliable operation in challenging environments (e. g. dust)

CERTIFICATES

- ATEX (Ex ma ta D)
- EAC Ex (Ex ma ta D)

MOUNTING

The SAA-102 ball joint adjustment unit (part of *EchoTREK* units) helps optimize coning or arching caused by the filling/emptying process in solids material storage. The transducer's position is adjustable during operation. It is recommended to check the position and the filled material's surface multiple times during filling/emptying. The best result is obtained by aiming the transducer at the center of the tank's bottom.

LEVEL SWITCHES

- Air-tight design, doublechamber
- Adjustable switch differential
- Up to 20 m cable length
- Max. +50 °C process temperature
- Max. 2 bar process pressure
- Level switch from potable water to sewage
- Fail-safe indication and pump control
- Suitable for tanks and basins

LEVEL SWITCH ES

The most frequent level instrumentation task is level control and limit-switching. NIVELCO offers reliable level control and limit level switching solutions for most mediums, from potable water to sewage, aggressive alkalis and acids, free-flowing, powdered, bulk, or granular solids.

Most of our level switches have explosionproof (ATEX or IEC Ex compliant) versions.

We offer suitable solutions for industries with special requirements, for example, shipbuilding that requires DNV, Bureau Veritas (BV), or SIL certificates.

NIVOCONT K CONDUCTIVE LEVEL SWITCHES

Float Level Switches

The NIVOFLOAT NL-100 float level switch is suitable for clean or slightly contaminated water. The NIVOFLOAT NW-100 tilting-float level switch is for sewage, tanks, basins, or cisterns. The waterproof dual-chambered float is injection-molded polypropylene, and the microswitch is incorporated into the float.

The cable is lead through a waterproof sealed entry point into the monolithic structure of the injection-molded plastic housing. It uses three copper wires of 1 mm² cross-section, insulated with PVC or Neoprene. The double-walled design provides outstanding safety for users in terms of life and touch protection. In addition, the **NIVOFLOAT** is suitable for various control tasks, such as liquid level monitoring and pump control. These devices serve reliably provided their operating conditions are appropriately selected.

FEATURES

- Dual-chambered float
- Switching differential is adjustable by counterweight (NL-100)
- Special float shape (NW-100)
- Up to 20 m cable length
- Process temperature up to +50 °C
- Process pressure maximum NL-100: 1 bar; NW-100: 2 bar
- Variants for potable water available
- IP68

APPLICATIONS

- Suitable for drinking water
- Industrial and communal sewage
- Tank filling/emptying control
- Overfill protection

Conductive Level Switches

NIVOCONT K conductive level switches can be used in liquids whose conductivity exceeds 10 µS/cm. The level of the liquid is detected by a probe that is immersed in the medium. Single and multiple rod type probes are available. They (and the tank wall, if conductive) act as electrodes, and the measured liquid is used as conductive material between them. Up to 4 rods can be fitted in a multiple-probe socket with an additional reference probe if the tank wall is not conductive. The probe's length must correspond with the measured level. When the liquid level reaches the probe, it changes the loop's conductivity, and the output relay is activated. The device senses the change in conductivity between the probes and the reference probe. KLP separators must be used every 0.5 m to provide appropriate distance between the probes.

Magnetic Coupling Level Switches

The NIVOMAG MK-200 magnetic float level switches are used for point-level detection and level control of liquids in all types of containers. Operating principle: the float's magnet activates the output switch via a non-contact coupling system. The device is available in numerous side and top-mounted versions, further widening the applicability of the device. For simpler jobs, fixed hysteresis models offer an affordable solution, while for a more complex level control application, the best choice is the adjustable hysteresis variants. Models with rubber and silicon sleeves can be used with contaminated liquids. The NIVOMAG switch can be fitted with an MMK tester to check functionality even when the liquid levels are not changing.

FEATURES

- Magnetic coupling between switch and float
- Operation w/o external power supply
- Side and top mounted versions
- Underwater version
- Fixed or variable hysteresis
- NIFLANGE weldable stainless steel flange variants
- Max. +250 °C process temperature
- Flame-proof version
- IP65 / IP68
- 5 years warranty

APPLICATIONS

- Overflow protection
- Level controls
- Supplementary fail-safe switch if combined with other devices
- Water tanks, feedwater tanks
- Fuel tanks
- Power plants

CERTIFICATES

- ATEX (Ex db eb mb G)
- IEC Ex (Ex db eb mb G)
- INMETRO (Ex db eb mb G)
- DNV
- Bureau Veritas (BV)
- SIL 1 (Safety Integrity Level)

VARIANTS

The following tables and diagrams help select the appropriate model for the job. When selecting a model, liquid density, mounting position, process connection, and the need for adjustable or fixed hysteresis or a rubber sleeve must be considered.

NIVOPOINT

Magnetic Tracking Level Switches

NIVOPOINT magnetic float level switches are suitable for single and multi-point level controlling tasks in non-hazardous and hazardous areas. The device consists of a probe tube, a float incorporating a magnet, and the housing that contains the connection terminals. Up to 5 switches can be connected to the probe. A sliding-sleeve on the top of the probe provides a simultaneous ± 25 mm adjustment possibility of the positioning of the switches. The wetted parts of the level switch are made of stainless steel. Plastic-coated versions are suitable for measuring aggressive liquids, and ATEX certified variants can be used with explosive materials. The measured medium and application determine floats and process connections.

The mini version of the **NIVOPOINT** magnetic float level switch is suitable for small tanks. The small size and easy installation make it perfect for detecting the maximum, minimum, or intermediate level using the tank's or device's connection stubs made for other purposes.

FEATURES

- Level switching without auxiliary power
- Up to 5 switching points
- Stainless steel and plastic-coated versions
- +150 °C process temperature
- Mini version
- Wide variety of floats
- IP67 / IP68
- Ex variant
- 5 years warranty

APPLICATIONS

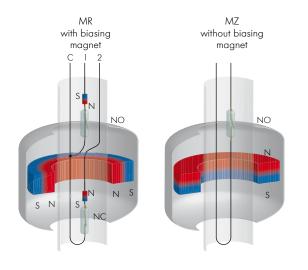

- Multi-point level switching
- For controlling pumps, valves
- Level detection of aggressive liquids
- Level switching of explosive liquids

- CERTIFICATES
- ATEX (Ex d G)
- Bureau Veritas (BV) (only for MZ□ types)

TEMPERATURE DATA FOR Ex VERSIONS

Class	T6	T5	T4	Т3
Highest ambient temp. from -40 °C	+65 °C	+80 °C	+95 °C	+95 °C
Highest medium temp. from -40 °C	+80 °C	+95 °C	+130 °C	+150 °C

OPERATION

NIVOPOINT magnetic float level switches use the interaction between a magnet in the float and the reed switches in the probe. The float moves along the stem, following the level of the liquid and activating the reed-switches. As the float moves along the reedswitches, it changes their state (NO or NC), and they stay triggered until the liquid's level falls, and the float moves along the reed switches again, breaking off the self-holding state and restoring the previous state of the reed-switches. The mini version does not contain biasing magnets. By following the level, the magnetic float activates the reed switches in the probe. The reed switches opens or close according to the position of the magnetic float. The default state is when the float is at the bottom position.

Vibrating Fork Level Switches for Liquids

NIVOSWITCH R-400/500 vibrating fork level switches with parallel vibrating fork are suitable for detecting the level of liquids. Mounted on pipes, tanks it can control filling/emptying, also can generate fail-safe alarms providing overfill- or dry run protection. The operation principle is based on that the electronic circuit excites a vibration in the fork probe. When the medium reaches and covers the fork, its vibration changes. The fork will start vibrating freely again as the medium sets it free. The electronics senses the change of vibration and gives output signal after a selected delay. The plastic-coated version is recommended to use for aggressive mediums, the highly polished version is recommended to use for abrasive mediums. The PNP/NPN transistor output versions can be connected directly to PLC, or relay unit.

Certain types of **NIVOSWITCH** vibrating forks are able to solve switching tasks of high-current loads with the help of **UNICONT PKK** switching amplifiers. **UNICONT** PKK-312-8Ex is a recommended Intrinsic safety switching unit designed for Ex rated vibrating forks.

FEATURES

EVEL SWITCHES

- Compact and mini compact version
- Rod length up to 3 meters
- ECTFE/PFA-coated version
- Polished vibrating part
- Hygienic versions with various process connections and 0.5 micron fine polishing
- Selectable sensitivity
- Relay or electronic output
- Switching performance does not depend on the change of liquid conductivity, dielectric constant, pressure and temperature
- Process temperature max. +130 °C
- Output can be toggled by test magnet
- NIFLANGE weldable stainless steel flange variants
- Ex, DNV variants
- IP67, IP65/IP68

APPLICATIONS

- For liquids: min. 0.7 kg/dm³ density and max. 10⁴ mm²/s viscosity
- Food & beverages industry, water industry, chemical industry, oil industry
- For normal or hazardous, aggressive (acids, solvents) liquids

RFM-500

RNM-402

 Covers a large variety of level detection, applications such as high/low fail-safe limit switch, overfill or dry-run protection, pump controls

LEVEL SWITCHES

Vibrating Fork Level Switches for Solids

NIVOSWITCH R-200/300 vibrating fork level switches with diverging vibrating fork are suitable for detecting the level of granular or powdered solids. Mounted on silos, bins it can control filling/emptying, also can generate fail-safe alarms providing overfill protection. The operation principle is based on that the electronic circuit excites a vibration in the fork probe. When the medium reaches and covers the fork, its vibration changes or stops. The fork will start vibrating freely again as the medium sets it free. The electronics senses the change of vibration and gives output signal after a selected delay.

The PNP/NPN transistor output versions can be connected directly to PLC, or relay unit. Certain types of NIVOSWITCH vibrating forks are able to solve switching tasks of high-current loads with the help of UNICONT PKK switching amplifiers.

FEATURES

- Compact and mini compact version
- Rod length up to 3 meters
- Selectable sensitivity
- Relay or electronic output
- Switching performance does not depend on the change of liquid conductivity, dielectric constant, pressure and temperature
- Process temperature max. +130 °C
- Output can be toggled by test magnet (optional)
- Ex variants
- NIFLANGE weldable stainless steel flange variants
- IP67, IP65 / IP68

APPLICATIONS

- For solids: min. 0.01 kg/dm³ density
- Level switching for powders, granules
- Chemical industry, food & beverages, paper mill and plastic industry
- For free-flowing, powdered solids, granules
- Covers a large variety of level detection, applications such as high/low fail-safe limit switch, overfill protection

CERTIFICATES

ATEX (Ex ta/tb D)

VARIANTS

This table helps choose the proper version for a given level switching task. Most essential aspect is the consistency of the measurement medium.

Ingress protection	DIN connector: IP65; M12 connector: IP67; cable: IP68	IP67		
Weight	~0.5 kg + 1.2 kg/m extension	~1.3 kg + 1.2 kg/m extension		
⁽¹⁾ Available cable length: max. 3	0 m			

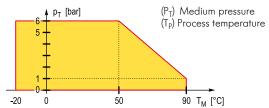

Ex INFORMATION

		Compact version, metal housing (RF□/RR□-300-B Ex)	
Explosion protection		Dust-ex	
Ex marking	ATEX		
Supply voltage		20250 V AC / 2050 V DC	
		2× M20×1.5 cable glands for Ø7Ø12 mm cable	
Electrical commention		Ex ta IIIC protection	
Electrical connection		2× terminal blocks for max. 1.5 mm ² wire cross section, 2× ½" NPT internal threads for cable protective pipes.	

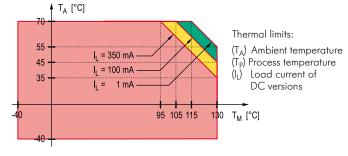

THERMAL PROPERTIES

Medium pressure – Process temperature PP flange version

OUTPUT PROPERTIES

			Compact version				
Output				RFD-200/300 / RRD-200	/300		
Relay				1 or 2 (SPDT) relays 250 V AC, 8 A, AC1 / 250 V AC, 6 A, AC1			
Response	when i	immersed		≤ 0.5 s			
time	when t	free	≤ 1 s – H density	≤ 1 s - H density 3 s - L density			
				Mini com	pact version		
Туре		Output		RC□-30	0 / RL□-300		
2-wire				When immersed: 14 mA ±1 mA			
DC		DC current change		When free: 9 mA ±1 mA			
		AC output for serial connection		Voltage drop (in switched-on state): < 10.5 V			
	AC OUIDUI IOI		senal connection	Residual current (in switched-off state): < 6 mA			
2-wire AC		Current load	max. continuous	350 mA, AC 13			
110			min. continuous	10 mA / 255	V; 25 mA / 24 V		
			max. impulse	1.5 A / 40 ms			
		Transistor switch		NPN or PNP output can be realized with appropriate wiring			
		Voltage drop (in switched-on state)	< 1.8 V			
3-wire		Current load (r	nax. continuous)	350 mA / U _{max} = 55 V			
DC		Residual currer	nt (in switched-off state)	< 10 µA			
		Response	when immersed		0.5 s		
		time	when free	≤ 1 s – H density	< 3 s – L density		

OPERATION

Compact and Mini compact version							
Power supply		Switching Fail-Safe Status LED		Status LED	Output		
rower soppiy		ownening	setting ⁽²⁾		Relay	Electronic	
	level		HIGH	0	1. 4 2. 7 5 6 6 6 6 9 Energised		
ON	High level		HIGH	0	1. 4 2. 7 5 8 9 De-energised		
ON	Low level		LOW	0	$\begin{array}{c} 14 \\ 5 \\ \hline 6 \\ \hline 9 \\ \hline 7 \\ \hline 9 \hline$		
	Low		LOW	0	1. 6 9 De-energised		
OFF	-	-	High / Low	\bigcirc	1.		

2-wire DC version							
Power supply	Switching	Status LED	Output				
ОН		0	14 ±1 mA				
UN		0	9±1 mA				
OFF	Fork immersed, or fork is free	\bigcirc	-				

 $^{(2)}$ In the case of the mini-compact version with integrated cable, it is determined by the appropriate wiring.

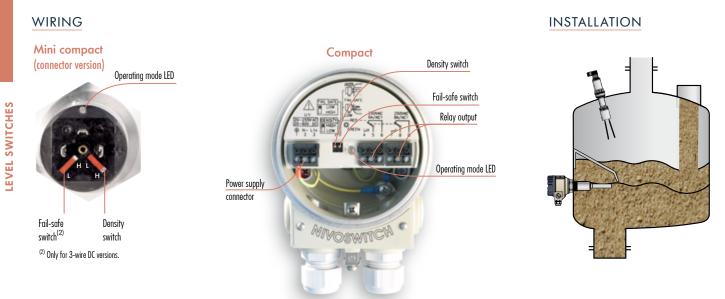

OPERATING MODE SWITCHES

Compact				Compact		
Fail-safe				Density		
HIGH	Fail-safe alarm is indicated with de-		HIGH	Medium density ≥ 0.5 kg/dm ³		
LOW	energized relay or open state of the output		LOW	Medium density < 0.5 kg/dm ³

Vibrating Rod Level Switches

NIVOCONT R

The **NIVOCONT R** series vibrating rod level switches are robust instruments, designed for low and high level indication of granules and powders with a minimum of 0.05 kg/dm^3 density. Mounted on tanks, silos or hopper bins, it controls filling/dumping, and sends alarm signals when necessary.

The circuit induces a vibration in the rod probe, when the medium touches the rod, the vibration changes, when the level drops and the medium no longer touches the rod, it starts to vibrate freely again. The electronics senses the change of vibration and sends an output signal after a predetermined delay.

FEATURES

- Length up to 20 m
- Adjustable sensitivity
- Highest process temperature: +160 °C
- Universal supply voltage
- Dust explosion protection
- Fine-polished probe
- IP67

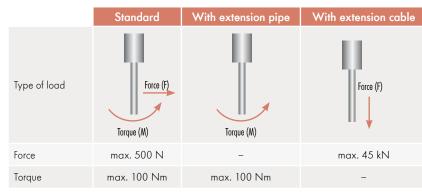

APPLICATIONS

- Powders, pellets, granulates
- Grains
- Ground products
- Stone-powder, chippings
- Cement, sand
- Coal, slag

CERTIFICATES

- ATEX (Ex ta/tb D)
- IEC Ex (Ex ta/tb D)
- UKCA Ex (Ex ta/tb D)
- KCs Ex (Ex ta/tb D)

Rotary Paddle Level Switches

NIVOROTA

The NIVOROTA rotary paddle level switch detects the level of lumpy substances or powders, grains, and granules. Mounted onto tanks, silos, and hoppers, it monitors and controls the level, filling, and dumping of the stored materials such as stone, ash, sand, coal, feed, beet slices, etc. A small electric motor drives the paddle, which rotates freely in the absence of material. When the material reaches the paddle, the motor is switched off, and the output switch is triggered. When the material level drops, the paddle is free to spin again, the motor is reactivated, and the switch returns to its original state. The NIVOROTA E-700 & E-800 series rotary paddle level switches provide all the advantageous features of the previous series in one unit. Dust Ex versions are available for use in hazardous environments.

FEATURES

- Level switching of free-flowing solids
- Extension cable or rod up to 3 m
- Automatic motor shutdown
- High-temperature version
- IP67
- Dust-Ex certified version
- Rotary force independent of the supply voltage
- Low supply voltage is indicated by a blinking LED

CERTIFICATES

- ATEX (Ex ta/tb D)
- VARIANTS

For appropriate model selection the following must be taken into consideration:

Insertion length: level switching application (low or high level switch) and the position of installation determine the insertion length.

UKCA Ex (Ex ta/tb D)

- Number of blades: specific gravity and particle size of the material provides orientation for the number of blades. Most commonly used is the stainless steel, single blade paddle. The paddle can be passed through the respective threaded connection. For lighter materials the use of 3-blade paddle is recommended. The available devices have 1 or 3-blades, they can be ordered with either paddle variant, and the paddles can be ordered separately as well.
- Flexible coupling: Use if the shaft of the instrument has to be protected against falling materials. (rocks, larger, lumpy materials)

APPLICATIONS

- Food industry: sunflower seeds, sunflower hulls, coffee and, cocoa powder, flour, sugar, etc.
- Chemical industry: plastic powders, granules, pellets
- Building industry: cement, sand, calcium powder, gypsum
- Energy industry: active soot, coal powder, fly ash

NIVELCO

RF-Capacitance Level Switches

The NIVOCAP CK capacitance level switches operate as capacitance meters in the RF (radio-frequency) range providing excellent immunity to deposits. NIVOCAP CK–100 is an outstanding choice for viscous, sticky substances where the rival vibrating or the other contact measurement technologies are not suited.

The mechanical construction consists of a stainless steel probe and a reference probe between two insulation layers. The microcontroller based electronics of the **NIVOCAP CK** evaluates continuously the voltage level proportional to the capacitance difference between the two probes and the housing. This way it provides more stabile measurement compared to the analog capacitance switches. The units are available only with painted aluminum housing, because one of the measurement reference points is the housing itself. The guard ring – an insulated section of the probe – makes the disregarding of material deposits possible, thus preventing false switching. The maximum probe length of the **NIVOCAP CK** series is 3 meter for probes with extension cable or rod available up to 10 meter in length. The high-temperature and the Dust-Ex approved models are suitable for harsh environments so they are ideal choice for power generation applications. In the case of liquids, only the lower, metalic part of the protruting probe allowed to be in contact with the medium!

FEATURES

- Intelligent electronic level switch
- Immune to material deposits
- Easy calibration
- Selectable sensitivity
- Fail-safe operating mode
- Extension rod or cable
- Calibration with external magnet
- High-temperature version
- Dust-Ex variants available
- 5 years warranty

APPLICATIONS

- For viscous, sticky materials
- For solids with E_r ≥ 1.5 relative dielectric constant and liquids
- Pharmaceutical and food industry
- Powerplant processes

CERTIFICATES

- ATEX (Ex ta/tb D)
- IEC Ex (Ex ta/tb D)

OPERATION, SET-UP

During operation, the electronics evaluates the capacitance difference of the connected measurement probe continuously. As long as the measured medium does not touch the probe, the measured capacitance is constant in reference to the housing. However, when the medium reaches the probe, the initial capacitance value starts to increase. The device picks up the change in the capacitance compared to a reference value recorded during the calibration procedure. For this reason, an empty-tank calibration must be performed after installing the instrument so that the unit can learn the default capacitance of the setup, and the learned value will be the reference capacitance value. The unit can be calibrated with an external magnet without removing the housing cover since the housing cover may not be removed in Dust-Ex environments when the unit is energized, but the unit needs power to be calibrated.

The sensitivity of the unit can be selected with a push-button in 4 ranges and fine-tuned with a potentiometer within the selected range.

CALIBRATION

The instrument must be calibrated after it is installed. The purpose of the calibration process is that the electronics learns the capacitance values belonging to the particular levels and use the data as reference values.

Calibration starts with pressing the CAL button or touching the marked point on the housing with the magnetic calibration tool for 5 seconds.

If the unit is installed in a hazardous (*Dust Ex*) environment, the housing cover cannot be removed as long as the unit is powered, and the device can be calibrated with the magnet without removing the housing cover.

The supplied permanent magnetic screw allows calibration through the aluminum housing. In this case, the status LED will blink blue during the calibration.

All the other settings (sensitivity range, sensitivity fine-tuning, delay, fail-safe operating mode, and turning magnetic calibration on) must be carried out outside the hazardous environment (e. g., in a control room) before mounting the instrument. Calibration can be performed multiple times.

SENSITIVITY SETTINGS

AnaCONT LCK CONDUCTIVITY TRANSMITTER

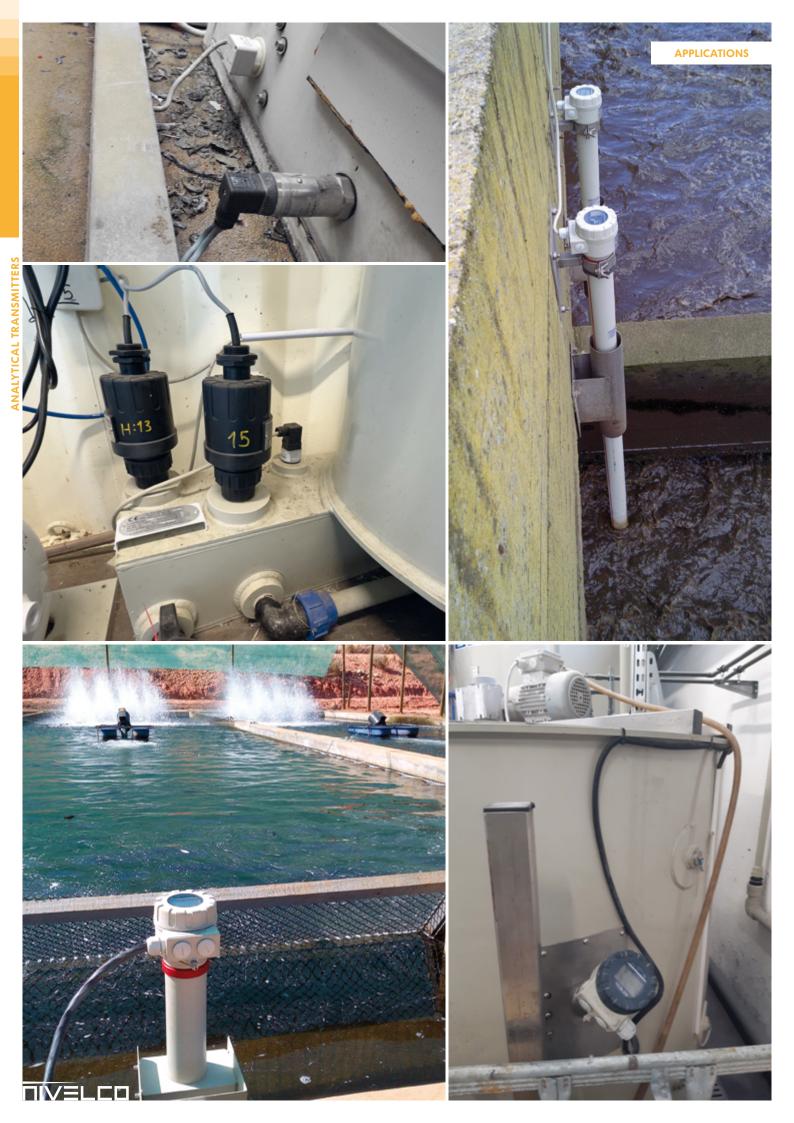

page 170

There is a constant demand for analytical measurements in practically all industries. Analysis of fluids and reliable control over the feeding of various chemicals is especially crucial in the water and wastewater, pharmaceutical, chemical, food and beverage, power industries. **NIVELCO's AnaCONT** analytical range provides HART[®]-capable transmitters for pH, ORP, dissolved oxygen and conductivity measurement.

- 2-wire EC transmitter
- Mini compact version
- Measuring range: 1 µS/cm...2 mS/cm
- Optional plug-in 4-digit LED display
- 4...20 mA + HART[®] communication
- IP68 / IP65

pH and ORP Transmitters

AnaCONT instruments are designed to measure pH and redox potential values of liquids and aqueous solutions.

pH measurement: Continuous measurement of acidity (pH<7) and of basicity (pH>7) liquids can be performed by the help of AnaCONT transmitters. The necessary feeding of chemicals and other technological functions can be controlled by the processed measured values. The potential difference between the submerged measuring and reference probe generates a voltage proportional to the concentration of the hydrogen ion in the measured fluid. This voltage is evaluated by the signal processing electronic module of the instrument. Based on the signals of the submerged probe and the temperature sensor the smart signal processing electronic module calculates a pH value normalized to +25 °C and generates a proportional output signal. The long term stability and accuracy of the measurement requires a periodic calibration of the sensors using the standard buffer solutions.

Redox potential (ORP) measurement: Similarly to the pH measurement, the measurement of the redox potential is based on the potential difference between measuring and reference probes. Oxidation or reduction occurs on the platinum surface of the measuring probe. Redox potential is a parameter that indicates the sum of oxidants and reducers in the measured medium. The output signals of the probes are processed by the electronic unit and it converts them into a proportional output signal. In order to get the desired medium parameters the reduction of liquids or feeding of suitable oxidant is executed based on the processed values.

FEATURES

- Compact and integrated variants
- Remote-mount versions up to 10 m
- Measuring range: pH: 0...14;
- ORP: ±1000 mV
- Wide probe selection to suit a host of applications
- User friendly software, graphic display
- 4...20 mA, HART[®], relay output
- Measurement simulation
- Wide range of accessories
- IP67 / IP68
- 5 years warranty

APPLICATIONS

- Checking of water quality
- Water production, wastewater treatment
- Pharmaceutical industry
- Food and beverage industry

MOUNTING VERSIONS

The constructions of the sensors on the compact and integrated versions are identical, so all accessories are applicable for both versions.

Using the accessories designed specifically for the AnaCONT family helps optimizing the installation of the transmitters making the installation process easier.

By using extension pipes and extension cables, the remote-mount versions allow the mounting of the electronics and the electrode part at any distance from each other.

Dissolved Oxygen Transmitters

AnaCONT LED

The dissolved oxygen (DO) measurement gives the quantity of dissolved oxygen in a liquid, in ppm or mg/l values. The sensor with an oxygen-permeable membrane is submerged in the liquid and it provides an electronic signal proportional to the oxygen concentration.

The electronics calculates and transmits the DO value normalized to +25 °C on the basis of the output current of the DO sensor and the potential of the temperature sensor immersed in the medium.

FEATURES

- Compact DO transmitter
- Remote mount versions up to 10 m
- Measuring range: 0...20 ppm
- Replaceable probe
- Temperature compensation
- Graphic display
- 4...20 mA, HART[®], relay output

AnaCONT IN SYSTEM WITH MultiCONT

The **MultiCONT** can handle digital data from up to 15 HART[®] transmitters measuring different values (e.g., DO temperature, *level, pressure*). The digital (HART[®]) information is processed, displayed, and – if necessary – it can be transmitted via RS485 to a PC. The transmitter can also be programmed remotely. Data can be visualized on a computer using the **NIVISION** process visualization software.

Dissolved Oxygen Transmitters

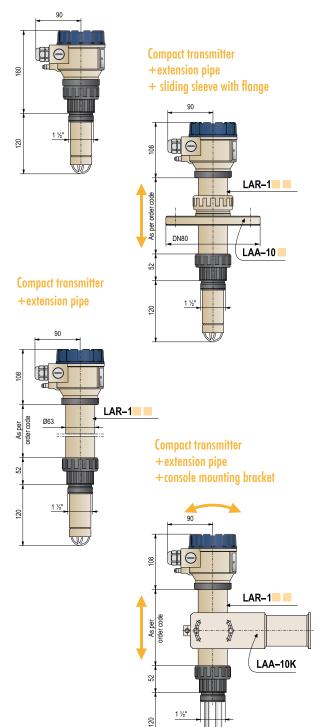

MOUNTING VERSIONS

The construction of the sensors of the compact and integrated versions are identical, so all accessories can be used with both types.

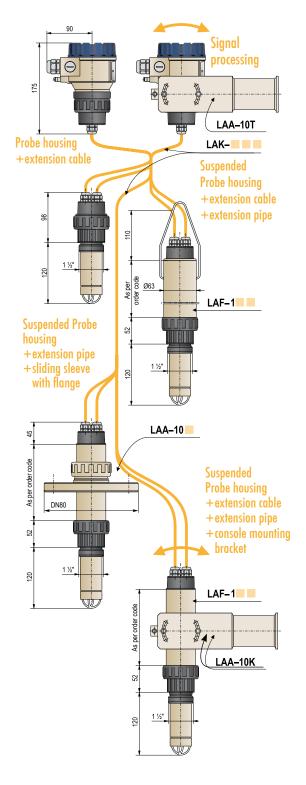

Using the accessories designed specifically for the AnaCONT family helps optimize the installation of the transmitters making the installation process easier.

By using extension pipes and extension cables, the remote-mount versions allow mounting the electronics and the sensor at any distance from each other.

Conductivity Transmitters

AnaCONT LCK

AnaCONT LCK – mini compact

The AnaCONT 2-wire mini compact conductivity transmitters are designed to measure the conductivity of liquids and convert the signal to 4...20 mA output. They are suitable for measuring clean, non-crystallizable liquids. The design and the small size of the transmitter, and the wide temperature range make the device useful in diverse industrial applications. The two probes are immersed in the measured liquid. The distance between the probes and their surface defines the cell constant (K) of the instrument. The cell constant determines the measuring range and thus the application area.

FLOW MEASUREMENT

NIVELCO's open-channel flow metering system offers 9 different sizes, compact types of **Parshall** flumes made of plastic (*PP*). The flume together with **EasyTREK** ultrasonic level transmitter and **MultiCONT** process controller makes a complete flow-measurement system.

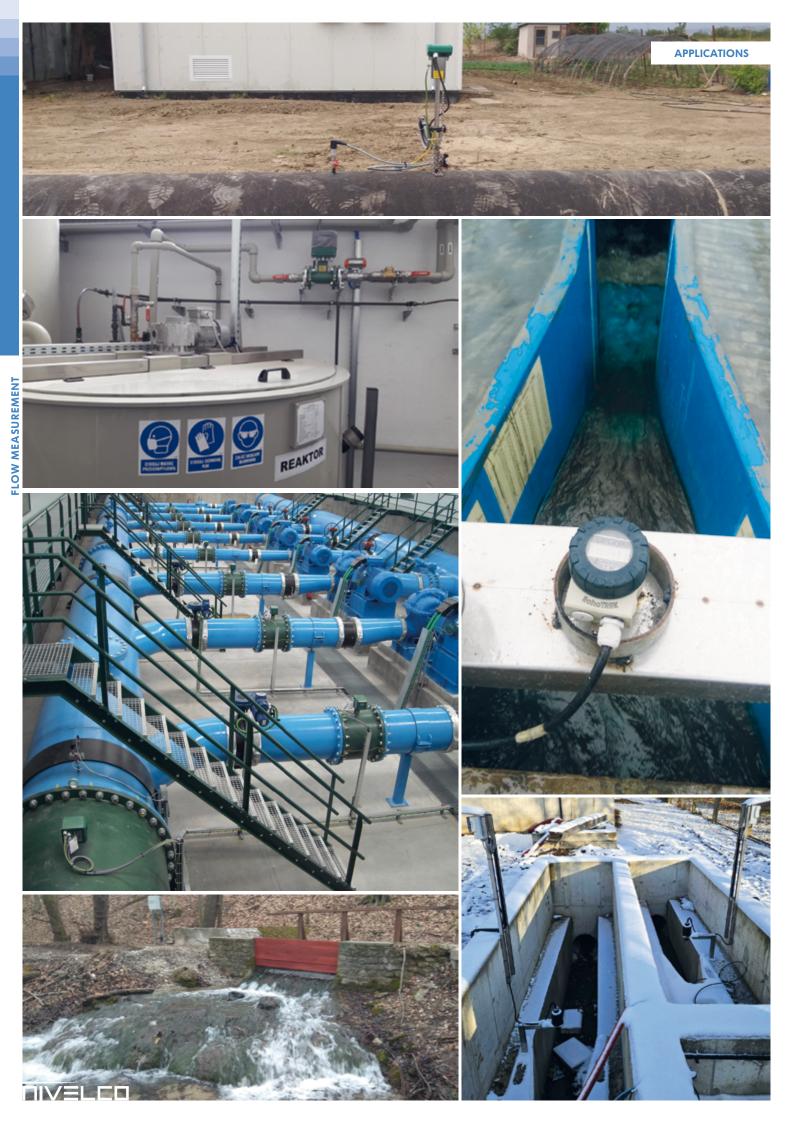

The **NIVOSONAR GPA** enables flow measurements on gravitational sewers, brook channels, irrigation channels or any other open-channel with the help of a **Parshall** flume.

NIVOSONAR

OPEN-CHANNEL FLOW MEASUREMENT

- 9 different sizes, compact versions of Parshall flumes made of plastic (PP)
- Factory calibrated dimensions
- Measuring range: 0.94...6627 m³/h
- Level transmitters are sold separately: EasyTREK or EchoTREK
- 4...20 mA, HART® communication
- For open-channels, treated effluent sewage measurements
- Certification of measurement

Open-channel Flow Measurement

NIVOSONAR

The NIVOSONAR GPA open-channel flow metering system measures the flow of liquids in various open channels and gravitational sewers. The flow-measuring system consists of an EasyTREK or EchoTREK ultrasonic level transmitter and a Parshall flume reducing element. Depending on the flow rate, nine channels of different sizes and measuring ranges are available with a total measuring range of 0.94...6627 m³/h. The Parshall flume is a rigid structure welded out of polypropylene sheets, with narrow tolerances to ensure high-accuracy metering; therefore, great care should be taken during transport and installation to prevent the flume getting deformed. Parshall flumes are delivered as compact units, and they are easy to install, with no special skills required.

When selecting the mounting position, laminar flow conditions must be ensured. Flow measurement in closed channels using a Parshall flume is possible only if the liquid does not fully occupy the entire cross-section of the channel (e. g., gravitational sewers). In such cases, it is inevitable to disassemble the pipeline network to insert a meter shaft to install the reducing element.

APPLICATION

If a Parshall flume is applied as a reducing element, the stagnation pressure causes the liquid level to rise. This change of the level is proportional to the velocity and rate of the liquid flow. An **EasyTREK** or an **EchoTREK** ultrasonic level transmitter measures the fluid level changes and transmits the measured data to the **MultiCONT** Multichannel Process Controller or a PC via HART® using a **UNICOMM** HART®–USB/RS485 modem. The ultrasonic transmitters are programmable, they gather and transmit (4...20 mA, RS485) the measured data, which is displayed remotely, and they can also have multiple relay outputs. The flowmeter formula of the selected Parshall flume is included in each NIVELCO ultrasonic transmitter's software. The **EasyTREK** and **EchoTREK** ultrasonic level transmitters (upon choice) and the **MultiCONT** process controller – which are required to build a complete measuring system – can be purchased separately.

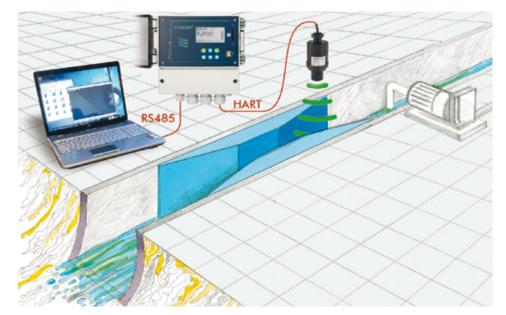

FEATURES

- 9 different sizes, compact verions of Parshall flumes made of plastic (PP)
- Reliable measurement with ultrasonic level transmitter
- Level transmitter can be used for all flume types
- Displaying of flow measurement and average or total flow

APPLICATIONS

- For open-channels, gravitational channels
- Measurement of feed or process water
- Yield measurement of irrigation canals
- Treated sewage effluent measurement

THERMOPOINT **MULTI-POINT TRANSMITTER**

- 2-wire multi-point temperature transmitter
- Temperature measurement of powdered, granular solids or liquids
- Up to 15 sensors / probe
- Up to 50 m probe length
- Temperature trend monitoring
- -40...+125 °C range
- HART[®] communication
- Explosion-proof variants

THERMOCONT TT TEMPERATURE TRANSMITTER

page 186

The most frequently measured physical parameter in modern process automation is temperature.

NIVELCO's temperature instruments are designed primarily to measure this vital parameter. Instruments range from simple thermal sensors to pressure-resistant, explosion-proof, high-temperature thermometers with digital communication and multi-point transmitters.

The product range starts with a simple Pt100 temperature sensor and ends with high temperature transmitters with Ex d explosion proof housing, HART® communication and multi-point temperature transmitters.

The number of order code variations and special types is very large, so that NIVELCO can offer a suitable solution for most applications. Our product line and the number of available design variations are extensive; we can provide our customers with the most suitable instrument for any application.

- -50...+600 °C range
- Plug-in display module
- 4...20 mA, HART[®] communication
- Integral "A" or "B" class Pt100 probe
- Probe length up to 3 m
- Stainless steel or PFA-coated probes
- Heavy duty housing
- Multiple head positions
- Explosion-proof variants

THERMOCONT T **TEMPERATURE SENSOR**

- page 190
- - -50...+600 °C range Resistance Temperature Detectors "A" or "B" accuracy class 2 or 4-wire versions Fast response sensor version
 - Probe length up to 3 m
 - Stainless steel or PFA-coated
 - Vibration-resistant version
 - Temperature sensor for gases
 - Explosion-proof variants

Multi-point Temperature Transmitters

The 2-wire loop-operated transmitter head communicates through HART® with control room devices such as a MultiCONT or a PC for further processing or datalogging. An advantage of MultiCONT based systems is that, if level measurement is required, the system can be augmented with level transmitters. The advantage of using a multi-function system is that new transmitters can be easily added to the existing loop using HART® communication.

FEATURES

- 2-wire multi-point temperature transmitter
- Communicates via HART[®]
- PACTware[™] compatible
- Up to 50 m probe length
- Up to 15 sensors
- Max. 35 kN tensile force
- Plug-in display
- Replaceable sensors
- Digitally addressed sensors
- -40...+125 °C medium temperature
- IP67
- Ex variant
- 5 years warranty

APPLICATIONS

- For normal and hazardous materials
- Temperature measurement of powdered, granular or free-flowing solids
- For transmitting temperature data from remote locations
- Grain, feed and food industry

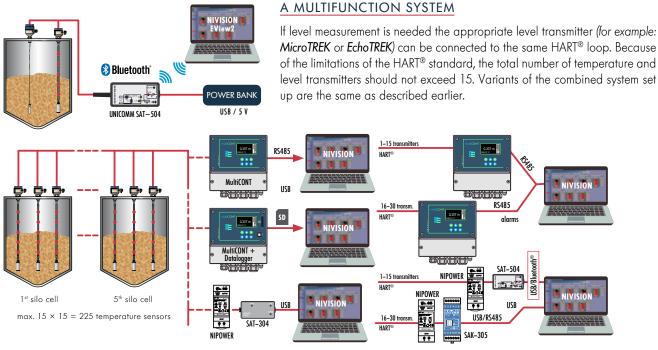

CERTIFICATES

- ATEX (Ex ia G)
- ATEX (Ex ia D)
- ATEX (Ex ta/tb D)
- ATEX (Ex ta D)

SYSTEM SET-UP VARIATIONS

Depending on the application, the system set up can be the following:

- 1. Information transmitted by the cable via HART® communication are received by MultiCONT and re-transmitted to a PC via RS485 protocol. The relays of the of MultiCONT can serve alarm functions.
- 2. Same as above, but a MultiCONT with datalogger function stores the incoming data on an SD card. The stored data can be processed or archived on a PC.
- 3. HART® signals are transmitted to a PC via a USB/RS485 connection using a UNICOMM SAK-305 or SAT-304 modem while using an SAT-504 modem wirelessly via a Bluetooth® connection. With the EView2 configuration program, the transmitters can be programmed from a PC, and with the NIVISION process display software, they can be integrated into a process control system.

Temperature Transmitters

THERMOCONT TT

THERMOCONT TT field devices, incorporating a Pt100 sensor, are 2-wire temperature transmitters with a 4...20 mA analog output or transmitter/indicator if equipped with a plug-in display. Intrinsically safe versions are available in standard and flame-proof housing.

The measured temperature can also be transmitted via HART[®]. **THERMOCONT TT** Temperature Transmitters are suitable for measuring the temperature of liquids in tanks and pipes and that of free-flowing, powdered solids and gases. Wall-mounted versions are available for ambient temperature measurement. The PFA-coated stainless steel probes can be used to measure the temperature of aggressive materials. The reinforced probe version is an ideal solution for the oil, gas, and heavy chemical industries and also an excellent choice for jobs where a robust probe is advantageous. A remote version of the transmitter is also available, which can be connected to a standard Pt100 sensor with a simple 4-wire cable.

FEATURES

- Temperature transmitting and displaying
- Measuring range: -50...+600 °C
- 4...20 mA output
- HART[®] communication
- Variety of head positions
- Stainless steel probe
- Plastic-coated version
- Flame-proof casing
- Plug-in display
- Strengthened probe version
- Ex variants
- NIFLANGE weldable stainless steel flange variants
- IP65
- 5 years warranty

APPLICATIONS

- For normal and hazardous mediums
- For temperature metering of liquids,
- vapors, gases and granules, powders Temperature transmitting
- for far distances Temperature metering in
- tanks, tubes, furnaces or boilersTemperature metering of
- halls or rooms

TEMPERATURE MEASUREMENT

Requested head position differing from standard ("A") version must be requested in the order.

SAK-305-2

SAK-305-6

Temperature Sensors

The wide range of **THERMOCONT** temperature sensors covers almost all industrial temperature measurement needs. The large number of versions and the variety of probes available make THERMOCONT a suitable choice for all industries.

THERMOCONT TFP resistance thermometers are primarily used as sensors for heated tools and bearings. The sensor tip of the TFP-500/600 types is made of copper to provide a faster response time. The TFP-300/400 has a process connection with a suitable mounting stud. The TFP-100/200/500/600 have different types of mounting bolts that are ordered separately. The mounting bolts allow the sensors to be screwed into various threads.

The **THERMOCONT TGP** resistance thermometer can be used primarily for bearing temperature measurements on high performance machines.

TGP bearing temperature sensor

FEATURES

- Single or dual Pt100 sensor versions
- 2, 3 or 4-wire types
- Fast response sensor version
- Stainless steel protection tube
- Up to 500 mm insertion length
- Temperature metering in bearing, baking tray
- Mounting bolts allow the sensors to be screwed into various threads

APPLICATIONS

- For temperature control of heated tools
- Bearing temperature sensing for motors, pumps
- Water & Wastewater Industry
- Chemical & Pharmaceutical
- Food & Beverage
- Oil & Gas

TEMPERATURE MEASUREMENT

- Heavy Industry
- Packaging Industry

Encapsulated Temperature Sensors

The wide range of **THERMOCONT** temperature sensors covers almost all demands in the area of industrial temperature measurement. The numerous versions and multiple kinds of applicable probes make **THERMOCONT** a suitable choice for all industries.

The **THERMOCONT TSP** sensors are installed in various kinds of mediums (e.g., *liquids*, gas, *fumes*) inside pipes, tanks and furnaces. PFA-coated probe versions having a steel flange with a PTFE-insert can be used in chemical and petrochemical applications where aggressive mediums could damage the steel probes. The shock-proof stainless steel construction includes the inner and external (*double*) tube and the welded flange.

FEATURES

- Single or dual Pt100 sensor versions
- 2 or 4-wire types
- Double sensor protection tube
- Fast response sensor version
- Plastic-coated or stainless steel protection tub
- Up to 3 m insertion length
- Vibration-resistant version
- Explosion-proof variants

TECHNICAL DATA

- Can be mounted to special technological places, tanks, tubes, furnaces or boilers
- Special versions for unique applications

APPLICATIONS

- Temperature measurement of liquids, gases, vapors
- Coated version for temperature measurement in aggressive media
 - Construction Materials
 - Chemical Industry
 - Food & Beverage
 - Oil Industry
 - Metallurgy
 - Recycling

Thermowell Temperature Sensors

THERMOCONT TN/TX

The wide range of **THERMOCONT** temperature sensors covers nearly all needs in industrial temperature measurement, both in terms of design and the selection of Pt100 resistance temperature sensors. **THERMOCONT TN/TX** reinforced-case temperature sensors are used with various media (*liquids*, gases, vapors) in pipelines, tanks, and furnaces. They are primarily designed for oil, gas, and heavy chemical industry applications but can be used anywhere where a robust protective tube design is an advantage.

To shield the thermal sensors physically and protect them from vibrations, a protective assembly is used, which consists of an outer and an inner tube. The outer protective tube is made of machined stainless steel welded to the flange for safety reasons. The ribbing on the outer protective tube does not allow the external ambient temperature to interfere with the accuracy of the measurement. The head has a protective chain to prevent falling off. The sensor insert can be replaced without dismantling the technological system. The stellite-coated variant ensures high wear resistance and corrosion resistance.

FEATURES

- Robust design for heavy chemical industry
- Stainless steel, drilled, tapered thermowell case
- Up to 800 mm insertion length
- Sensor can be replaced without removing the instrument from the process
- Vibration-resistant version
- 2 or 4-wire types
- Welded flange
- Gas thermometer version
- Explosion-proof variants available

- APPLICATIONS
- Temperature measurement of liquids, gases, vapors
- Special versions for unique applications
- For applications exposed to mechanical damage
- Chemical and Oil Industry

INDUSTRIAL SENSORS

Non-contact proximity switches are popular devices in industrial process automation. **MICROSONAR** ultrasonic proximity sensors are an ideal choice for simple applications where the use of high-performance units, such as **EasyTREK** or **EchoTREK**, is not necessary.

MICROSONAR proximity sensors use the non-contact ultrasonic principle to detect and measure the position of an object. They act as proximity switches, or transmit the distance measured between the sensor cover and the target.

INDUSTRIAL SENSORS

Ultrasonic Proximity Sensors and Transmitters

MICROSONAR

MICROSONAR proximity sensors use the non-contact ultrasonic principle to detect and measure the position of an object. They act as proximity switches, or distance measured between the sensor cover and the target. For transmitter models, the output signal is either 4...20 mA or 0...10 V, which can be assigned to any section of the nominal range. Switching points of the proximity switch option can be set to any point within the range.

TECHNICAL DATA

FEATURES

- Non-contact sensor
- Analog or switch output
- Narrow beam angle
- Two measuring ranges (1 m / 6 m)
- Adjustable sensing distance
- Selectable processing parameters
- Error indication output
- Maintenance-free operation
- LED indication
- Protection against short circuit and inverse polarity
- Local and remote programming
- 5 years warranty

APPLICATIONS

- Measuring distance to objects
- Proximity sensing and switching
- For small transport vehicles, trolleys, fork-lifts
- For packaging equipments
- For positioning equipments

UDP-2DD

In the world of industrial metrology, monitoring and controlling the pressure of fluids and gases and the processing of the measured results are of the highest priority. NIVELCO covers the needs of several industries and application areas with the wide selection of the NIPRESS family.

Features of the **NIPRESS** device families:

- Advanced pressure measuring technologies
- Relative and absolute pressure measurement
- Devices for nearly all mediums
- Several accuracy classes
- Several mounting options
- Excellent overload resistance
- 2- or 3-wire systems
- Devices with lots of different electrical and process connections
- Solutions for rough conditions (aggressive medium, wide temperature range, dynamic pressure changes)
- Solutions for stringent hygienic requirements
- Excellent price/value ratio

Main categories of the NIPRESS device family:

- Pressure switches
- Pressure transmitters
- Differential pressure transmitters

NIPRESS DK PRESSURE SWITCHES

page 203

- Silicon, ceramic or stainless steel sensor
- Relative or absolute measuring mode
- Up to 4 contacts
- Swiveling and configurable 4-digit display module
- Versions configurable via PC or programming device
- Stainless steel housing versions
- Ex ia variants*
- Integrated cable version

NIPRESS D PRESSURE TRANSMITTERS

- Ceramic or stainless steel sensor
- Relative or absolute measuring mode
- For high-pressure (up to 2200 bar)
- For vacuum, overpressure and absolute pressure measurement
- Measuring range downscale
- HART[®] communication versions Two-chamber cast aluminum or stainless steel housing
- Ex ia or Ex d variant*
- SIL 2 variant*

NIPRESS DD DIFFERENTIAL TRANSMITTERS

- Piezoresistive silicon or
 - stainless steel sensor
 - Relative measuring mode
 - Measuring range downscale
 - Up to 2 contacts
 - Cast aluminum housing
 - Static overpressure 400 bar
 - HART[®] communication versions
 - High accuracy
 - Mechanical robust versions
 - Hastelloy[®] sensor version
 - Ex ia variants*

*Ex or SIL versions are available only on request for custom price.

PRESSURE SENSORS

page 213

Pressure Switches

NIPRESS pressure switches are used in hydraulic and pneumatic applications for monitoring and controlling the pressure via switching outputs. Due to the simple handling as well as the variety of software features (*switching points and hysteresis freely configurable, delay function, storing min-/max-value, scalable display and analog output signal, etc.*) the pressure switches with display are especially suitable for general plant and machine construction and processing industry applications.

The DK-100 series are electronic pressure switches with silicon sensors for pneumatics and vacuum applications.

The DK-200 series, with ceramic sensor, is excellent for measuring, controlling, and processing technology applications in hydraulics and mechanical engineering.

The DK–100 and DK–200 series pressure switches can be configured and programmed with one of the two optionally available configuration kits (CIS Set USB kit for PC or P6 programming device).

The DK-300 series are electronic pressure switches with a stainless steel internal or flush sensor. This device is a successful combination of an intelligent pressure switch and a digital display.

The DK-400 series are electronic pressure switches with a welded stainless steel flush sensor. This device is a successful combination of an intelligent pressure switch and a digital display. This makes it suitable for numerous applications in various industrial sectors and is also ideal for viscous and pasty mediums.

The DK-500 series are electronic pressure switches with a stainless steel sensor. This device is a successful combination of an intelligent pressure switch and a digital display. This makes it suitable for numerous applications in various industrial sectors. It comes with a swiveling display and PNP contact outputs.

The **DK-600** series are electronic pressure switches with a ceramic sensor. This device is a successful combination of an intelligent pressure switch and a digital display. This makes it suitable for numerous applications in various industrial sectors. Due to the flush diaphragm, it is suitable for viscous, pasty, and highly contaminated media. The robust swiveling stainless steel housing is designed for rough conditions and in harsh operating environments. The standard version of the device comes with PNP contact.

The **DK–700** series are electronic pressure switches with a welded stainless steel flush sensor. This device is a successful combination of an intelligent pressure switch and a digital display. This pressure switch has been developed for the process industry, especially for the food and pharmaceutical industry. It comes with a swiveling display and with PNP contact outputs.

The DK-800 series are intelligent pressure switches and a digital display with a ceramic sensor designed for general industrial applications. Its flush diaphragm version is suitable for viscous, pasty, and highly contaminated media. The standard version comes with PNP contact outputs and a swiveling display.

SPECIFICATIONS

- Relative or absolute pressure switching
- -1...600 bar pressure range
- Piezoresistive or ceramic sensor
- With or without a display
- IP54, IP65, IP67
- 5 years warranty

APPLICATIONS

- Pressure switching of gases, steam, and fluids
- Overpressure measurement
- For tanks, pipes, and pressurized vessels
- Mobile hydraulics, dry-run protection, flow monitoring, grease monitoring, gas compressors, test and construction engineering

Pressure Transmitters

NIPRESS pressure transmitters with multiple sensor technologies combined with various housing materials can be used for almost all relative or absolute fluid or gas pressure measurement tasks requiring different accuracy. Their design, high overload capability and the possibility to install the units in any physical position makes them suitable for a wide range of industrial applications.

D-200 series with a ceramic internal sensor is suitable for the measurement of aggressive gases, steam and fluids, but not recommended for materials that are prone to sediment, crystallize, or stiffen. It's not recommended for dynamic overpressure either. The transmitters measure overpressure and can be used in 2-wire system.

D-300 series with a stainless steel internal sensor is suitable for static or dynamic stress, but not recommended for materials that are prone to sediment, crystallize, or stiffen. Absolute pressure measurement is feasible at ranges over 0.1 bar.

D-400 series with a stainless steel flush sensor is especially suitable for contaminated liquids and measuring bottom pressure in containers. The high-temperature versions of the family can be used for process temperature up to

+150 °C or up to +300 °C. Absolute pressure measurement is feasible over 0.4 bar. The standard pressure-transmitting liquid of the sensors is silicone oil, but the units can also be ordered with a pressure transferring liquid suitable for food industry.

D-500 series with a ceramic flush sensor is suitable for the measurement of aggressive, contaminated, pasty media, and low pressure oxygen applications.

D-600 series screw-in pressure transmitters with a ceramic flush sensor are suitable for measuring the pressure of fluids, oils, and gases. Due to their flush sensor, they are ideal for measuring viscose and polluted media. For aggressive media, we recommend a PVDF process connection.

D-700 series screw-in pressure transmitters with a ceramic flush sensor can be used for low pressure measurements. Due to their flush sensor, they are ideal for the measurement of viscose and pasty media. With PVDF housing and process connection they are suitable for using in aggressive media. For special applications they can be ordered with PTFE-coating.

D-800 series with stainless steel flush sensor consist of robust screw-in pressure transmitters with excellent performance. Its modular construction provides high flexibility to the user.

D-900 series with ceramic internal sensor was designed especially for applications in plant and machine engineering as well as laboratory equipment. The pressure transmitter is suitable for measuring small system pressure, however due to its optional 99.9% Al₂O₃ sensor it also offers high-temperature, overpressure, and media resistance.

D-A00 series with a stainless steel internal or flush sensor is ideal for the process industry as well as for pharmaceutical usage. It can be used for measuring the pressure of gases and steam up to 600 bar. The pressure transmitter provides HART[®] communication, and is available with several process connections and housing materials *(internal or external threads, flanges)*. It's high-temperature version with cooling elements is applicable up to +300 °C.

D-B00 series with a ceramic flush sensor has a really high overpressure resistance due to its 99.9% Al_2O_3 sensor. It is ideal for the measurement of gases, steam, and fluids. The pressure transmitter is equipped with HART[®] communication and is available with several process connections and housing materials.

D-C00 series with a stainless steel internal sensor can be used for measuring extremely high pressures (up to 2200 bar), which makes it suitable for hydraulic applications. The base element of the device is a thin film sensor, which is welded to the pressure port. The series offers high reliability, and easy handling.

The standard pressure transmitting liquid of the **NIPRESS** transmitters is silicone oil, but the units can also be ordered with a pressure transferring liquid suitable for food industry. Depending on the type the pressure transmitters can be applied both in 2 and 3-wire systems. Some transmitters can be equipped with the loop-powered, programmable, plug-in display **UNICONT PLK-501**, which is ordered separately.

SPECIFICATIONS

- Relative or absolute pressure measurement
- −1...2200 bar pressure range
- Piezoresistive or capacitive, ceramic or sainless steel sensors
- Compact tubular housing devices
- Stainless steel or cast aluminum
- Chemical resistant seal
- Optional plug-in display (for certain devices)
- IP65, IP67, IP68
- 5 years warranty

APPLICATIONS

- Pressure measurement of gases, steam, and fluids
- Vacuum, overpressure or absolute pressure measurement
- In tanks, pipes, and pressurized vessels
- HVAC, hydraulics, pneumatics, mechanical and plant engineering, energy industry, food and beverage industry, pharmaceutical industry, chemical industry, oil- and gas industry

PRESSURE SENSORS

Differential Pressure Transmitters

NIPRESS differential pressure transmitters are available with different sensor technologies combined with compact stainless steel or cast aluminum or plastic housings. The wide variety of the product range can measure the pressure of numerous fluids and gases, monitor ventilation ducts, filters and fans in HVAC areas as well as measure the level in closed, pressurized tanks.

DD-200 series with a stainless steel (optionally Hastelloy® C-276) sensor is for 2-wire systems with HART® communication. The differential pressure transmitter's main application area is the process industry, and can be used in closed, pressurized tanks. The device also has a display and operating module.

> DD-300 series with a stainless steel sensor can be pressurized on both sides with fluids or gases. The differential pressure transmitter measures the difference between the positive and negative side. Due to its compact size, it can be installed in tight spaces.

DD-400 series with two piezoresistive stainless steel sensors and with swiveling display. The process connection can be used for measuring the pressure difference between gases and fluids.

DD-600 family uses a silicon sensor, has various measuring ranges between 0...1 bar. It is a wall-mountabledesign, suitable for measuring dry, non-aggressive gases and compressed air. This device has short circuit protection and inverse polarity protection.

The NIPRESS DD-600 can be used for a wide range of different HVAC applications. Its robust design makes it excellent for laboratory and industrial use. The preferred areas of use are in heating, ventilation and air conditioning systems; clean rooms and medical technology, filter technology and draft-metering.

DD-200

SPECIFICATIONS

- Relative or absolute pressure difference measurement
- –1...70 bar pressure range
- Piezoresistive or capacitive sensor
- Stainless steel, cast aluminum or plastic housing
- Optional swiveling display
- IP65, IP67
- 5 years warranty

APPLICATIONS

- Differential pressure measurement of gases, steam, and fluids
- Overpressure measurement
- Filter and vent controlling
- In tanks, pipes, and pressurized vessels
- HVAC, mechanical and plant engineering, oil- and gas industry, chemical industry, energy industry, food and beverage industry

SIGNAL PROCESSING UNITS

Integrating NIVELCO's wide range of level instruments into process control systems requires intelligent and versatile signal processing and control devices.

Our instruments are designed to maximize compatibility with our transmitters and sensors. With our signal processors and controllers, our customers can create complete industrial measurement and process control systems using only NIVELCO instruments.

UNICONT PM UNIVERSAL CONTROLLER

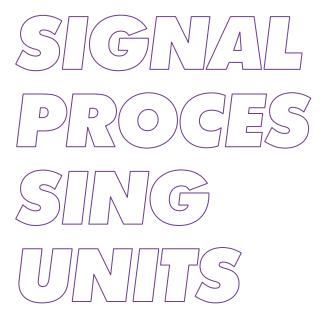

- Dual-line, 7 segment, 4-digit LED display
- Wide range of resistance thermometers (Pt, JPt, Cu)
 - 0...20 mA, 4...20 mA or 0...10 V input
 - Up to 3 power relays
 - ON-OFF, PD or PID control
 - Auto tuning
 - Heating / cooling control
 - Current transformer (CT) input

MonoCONT

Multichannel Process Controller

The **MultiCONT** unit is a universal interface between NIVELCO's HART®-capable intelligent level transmitters and other elements of the process control systems like the PCs, PLCs, displays, and actuators. Besides its role as an interface, the MultiCONT can power the 2-wire transmitters while handling complex control tasks. The large LCD or OLED dot-matrix display is comprehensive and informative. As a special feature, it can display the echo map when the MultiCONT works with an **EchoTREK**, **PiloTREK**, or **EasyTREK** transmitter. The **MultiCONT** supports communication with 15 standard HART®-capable 2 and 4-wire NIVELCO transmitters or four Ex ia HART®-capable 2-wire NIVELCO transmitters. If a **MultiCONT** is used with NIVELCO's **MicroTREK** or **PiloTREK** microwave level transmitters, the maximum number of transmitters in a loop cannot exceed 6 for normal transmitters and 2 for Ex-certified transmitters. If the number of transmitters in a system exceeds the number of transmitters a MultiCONT can handle, other **MultiCONT** units can be added to the system via RS485. The transmitters can be programmed remotely, and their parameters and the measured data can also be downloaded using a **MultiCONT**. Outputs, such as the 4...20 mA, relays, and digital outputs, can be controlled using measured and calculated values.

The internal current outputs (up to 2) of the **MultiCONT** can transmit and even modify the information supplied by the transmitters. The built-in relays (up to 5) can be freely programmed and assigned to the transmitters.

FEATURES

- Provides a flexible solution to commissioning process control systems containing HART[®]-based intelligent (level, temperature or pressure) transmitters
- Galvanically isolated 4...20 mA outputs for transmitters
- Depending on the type of the transmitters, 1 to 15 (standard) or 1 to 4 (Ex ia) channels
- Highly informative large LCD or OLED display
- Ex ia variant
- Simple 6-button programming
- Trend logging in internal memory or SD memory card
- USB connector for downloading data from internal FLASH memory
- Universal interface module expansion via RS485
- "Echo-Map" for EchoTREK, PiloTREK, MicroTREK and EasyTREK ultrasonic transmitters
- 5 years warranty

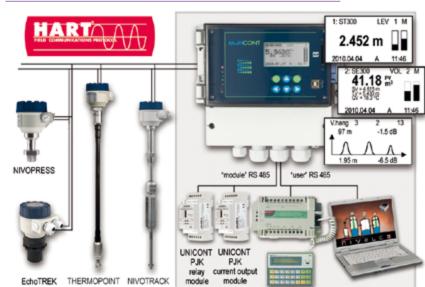

APPLICATIONS

- Remote programming, displaying of transmitters data
- Power supply for 2-wire transmitters
- Process controller for HART[®]-capable transmitters
- Displaying measured data in numerical and bargraph mode
- Data transmission via RS485 (via HART[®] or Modbus protocol)
- Simple data-logging function
- Trend or flow-measurement logging

Ambient temperature		−20+50 °C	

 $^{(1)}$ In the case of OLED, the lifetime of the display depends on the way the user applies the screen saver function and hence it is not covered by the warranty.

SPECIAL FEATURES

Trend logging (optional)

MultiCONT versions with an on-board logger can store the measured values and three additional parameters of the transmitters to the system into the internal flash memory or an SD memory card. There are two logging modes, time-controlled and event-controlled. Monitoring the average, minimum, and maximum value or highest flow values can be used only with NIVELCO transmitters in flow-metering mode. The content of the internal memory is retrievable through USB, within the capacity of 65 000 entries. The unit can handle SD cards up to 32 GB capacity.

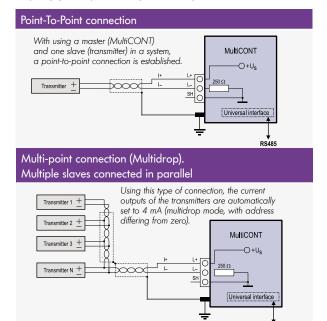

NIVISION (optional) Process Visualization Software

RS485-capable versions of the **MultiCONT** can communicate with NIVELCO's **NIVISION** process visualization software to graphically indicate parameters of process control systems on a PC. The process, the measured values, or any calculated values can be visualized in tables with **NIVISION**. **NIVISION** performs data logging, trend monitoring, database handling, and various other tasks in addition to basic visualization. The software is sold as a customtailored product.

OUTPUT TYPES

O. Januar	Display only	Number of relays					
Outputs	(without relay) 1		2	3	4	5	
Only display (w. o. RS485 or current output)		•		•	•	•	
RS485 Interface							
1× 420 mA output							
2× 420 mA output							
RS485 + 1× 420 mA analog output							
RS485 + 2× 420 mA analog outputs							

COMMUNICATION BETWEEN MultiCONT & TRANSMITTERS

SYSTEM SET-UP

There is a Master-Slave relation between **MultiCONT** and the connected transmitters. Through the **MultiCONT** the transmitters can be programmed or their parameters checked and modified. Reading the process values of the transmitters is easy to do by the **MultiCONT**. In case of using **MultiCONT** with multiple transmitters, the units should be addressed with numbers (*Short address*) differing from zero. Using two transmitters with the same Short address is not possible. **MultiCONT** can handle a number of max. 15 transmitters with HART[®] communication. When using 2-wire transmitters, the current output of the transmitters will be limited to 4 mA, because of the capacity of the **MultiCONT's** power supply, which is rated at 60 mA with standard transmitters.

NEW Smart Field Controller & Display

The MonoCONT single channel field controller & display is a universal interface between NIVELCO's HART[®]-compatible intelligent level transmitters and other elements of the process control systems like the PCs, PLCs, displays, and actuators. The field loop display and controller allow on-site reading. When connected to NIVELCO's EchoTREK, PiloTREK, MicroTREK, or EasyTREK transmitters, the MonoCONT provides complete remote programming capability over an interactive text menu as well as "Echo-Map" visualization.

The unit can also perform stand-alone control functions via a dedicated transistor or relay output. It can also be connected to other process control devices via the optional RS485 communication line (USER RS485) to perform higher-level tasks. The **MonoCONT** can communicate with 1 transmitter with HART[®] output.

FEATURES

- Provides a flexible solution to commissioning process control systems containing HART[®]compatible intelligent (level, temperature or pressure) transmitters
- 4-key interface
- For 1 transmitter with HART[®] output
- Field loop display and controller module
- Ex variant
- Data logging to internal memory

APPLICATIONS

CERTIFICATES

- Remote programming, displaying of transmitter's data
- Process controller for HART[®]-compatible transmitters
- Displaying measured data in numerical and bargraph mode
- Data transmission via RS485 (via Modbus protocol)
- Simple data-logging function
- Trend or flow-measurement logging

Universal Controllers

The UNICONT PMM-300 is a universal one or two channel process controller with relay and analog outputs and a PID algorithm that supports a wide range of functions. It can be used for standard to extraordinary temperature control tasks (cooling, heating). In addition to the usual inputs, practically all common temperature sensors can be connected. Thanks to the auto-tuning function, the controller can be successfully operated by technicians not used to process control.

The 4-digit displays can be read from a distance. The UNICONT PMM–300 is highly accurate and easy to use, making it suitable for use as a panel instrument in both laboratory and industrial process control applications.

FEATURES

- Programmable inputs
- 4-digit LED display
- Heavy-duty relay contacts or analog output
- 4...20 mA output
- ON/OFF, PD or PID control algorithm
- Auto-tuning feature
- Relay outputs up to 4
- 32-point linearization
- Window comparator differential metering

APPLICATIONS

- Temperature display
- Switching, control or transmitting tasks
- Power valve control
- Sequence control
- Dual-channel display

Universal Controllers

The UNICONT PMG-500 series universal controllers are 1/16 DIN (48×48 mm) process controllers with relay and analog outputs or a PID algorithm supporting versatile functions. The universal analog PID controllers can be used with popular RTD (*Pt, JPt, Cu*) resistance thermometers and various thermocouples for temperature measurement, control and processing of signals from transmitters with 0...20 mA, 4...20 mA and 0...10 V DC, 0...5 V DC, 1...5 V DC, 0...100 mV DC output. The controller's output signal can be a relay, a continuous 4...20 mA process current signal, or an SSR driver. An additional alarm relay is provided for limit monitoring. The unit is microprocessor based, has auto-tuning software and its PID controller can find the optimum PID constants. The PMG-500 Series is capable of RS485 communication and has an input to receive the output signal from a current transformer (CT). The large two-color display is easy to read even from a distance.

PMG-500

TECHNICAL DATA

FEATURES

- Universal input
- 4...20 mA output, relay outputs
- SSR driver output
- RS485 communication
- ON-OFF and PID control
- Auto tuning (AT) feature
- Current transformer (CT) input
- 48 × 48 mm front panel

APPLICATIONS

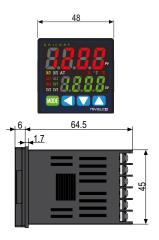

- Temperature display
- Switching, control tasks
- Simultaneous cooling / heating control
- For automated manufacturing processes
- Alarm indication

UNICONT PJK UNIVERSAL INTERFACE MODULE

NIVELCO's broad product portfolio requires many types of system accessories. These devices facilitate the integration of NIVELCO level instruments into process control systems. The range of system components consists of universal displays, loop displays, interface and other expansion modules, time relays, etc.

- MultiCONT expansion module
- RS485 communication
- Output variations:
 - 2× current outputs
 - 2× relay outputs (250 V AC, 8 A)
 - 1× current output and 1× relay
- DIN-rail-mountable
- Provides galvanic isolation
- Level controlling and limit level indication

UNICONT PKK CURRENT CONTROLLED SWITCH

page 249

- 4...20 mA input
- DIN-rail-mountable
- Can power 2-wire transmitter
- Galvanic isolation
- Power relay (SPDT) output
- Switching amplifier for vibrating forks
- Wire monitoring
- Ex ia intrinsically models

UNICONT PDF / PLK LOOP DISPLAYS

- No need for power supply
- Galvanic isolation
- Ex ia intrinsically models

page 260

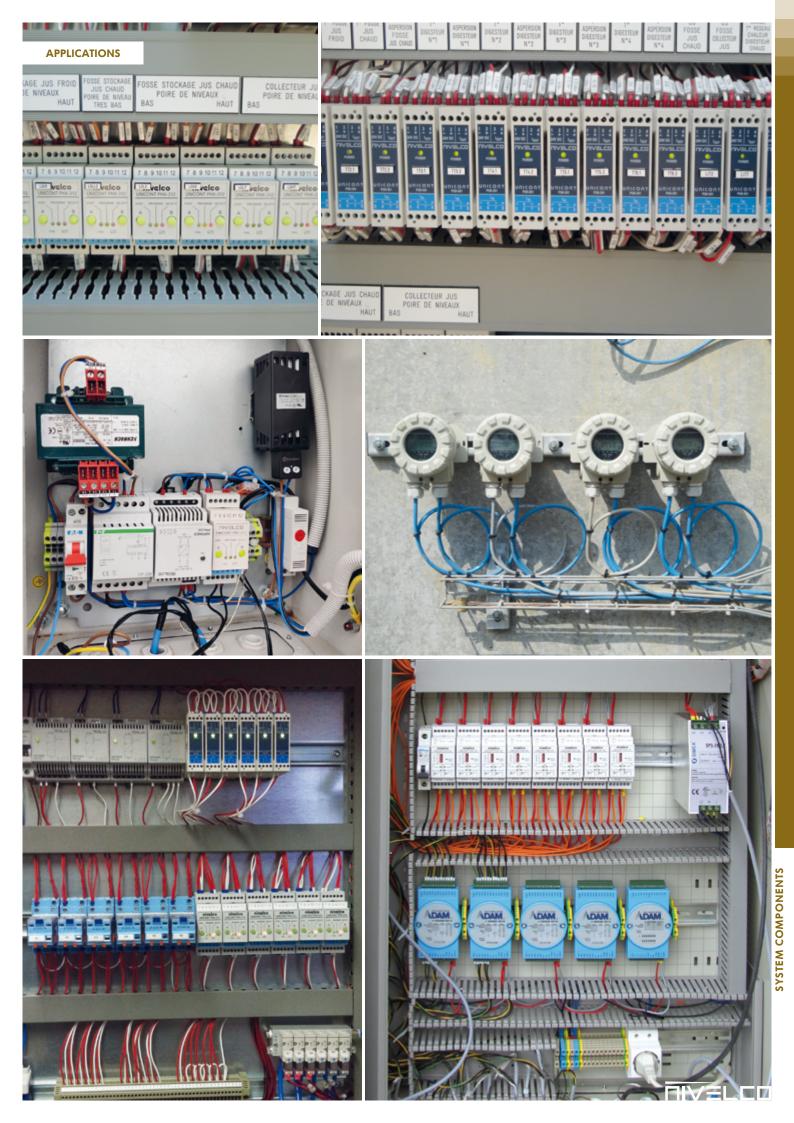

- Complies with DIN standards
- Materials: 1.4571 stainless steel
- Size: threaded versions up to $\frac{1}{4}$ "...2", Triclamp versions 3⁄4"...3"
- High-pressure resistance
- BSP; NPT; M20×1.5; TriClamp process connections
- Easy to install

Universal Interface Modules

The UNICONT PJK series is a universal interface module that can be controlled via RS485 and (depending on the type) provides relay(s) and/or 4...20 mA current output(s). The DIP switch on the front panel of the module is for setting the address. The Universal Interface Modules can be widely-used as a part of the following applications:

- Expanding MultiCONT multichannel process controller with relays or current outputs
- Peripheral unit of PLC process control systems
- Peripheral unit of PC automated process control systems

The UNICONT PJK-100 universal interface modules provide an essential solution if the number of relays or current outputs of the MultiCONT is not enough in a system. The device can also be used as a peripheral unit for PLC or PC-controlled process control systems communicating via Modbus RTU protocol. The number of relays in the UNICONT PJK-100 extension modules and the MultiCONT together must not exceed 64, and the number of analog outputs (4...20 mA) must not exceed 16. There is a special module with both relay and current output in the variety of the UNICONT PJK-100 series. The maximum number of these modules is 32. The programming of the UNICONT PJK modules can be done via HART® or Modbus protocol with the help of the central unit of the communication network, which can be a process control computer or a MultiCONT device. The switches in the front panel of the module are only for setting the address.

PJK-102

FEATURES

- RS485 interface
- Modbus or HART[®] communication protocol
- Output:
 - 2 current
 - 2 relay
 - Current and relay (for mixed systems)

TECHNICAL DATA

DIN-rail-mountable

APPLICATIONS

- Universal Interface Module
 - Expansion module for **MultiCONT**
 - For PLC process control systems
 - For automated process control systems operating on RS485

Multifunctional Current-Controlled Switch Modules

UNICONT PKK-312 series area 4...20 mA current-controlled limit switches featuring galvanic isolation, also available as intrinsically safe units. The input 4...20 mA signals can be transferred from passive or active outputs of 2 or 4-wire transmitters. The value of the input signal will be compared in the unit of the set (taught) value, and the state of the galvanically isolated relay changes with the comparison mode programming.

The double throw output relay can be programmed for the following functions:

- Limit switch (high or low fail-safe)
- ON-OFF control with selectable switching difference
- Monitoring of discontinuity or short-circuit of the cable
- Window comparison operation mode with energized or de-energized relay state

The UNICONT PKK-312-8 Ex is a special version designed to operate with NIVELCO's Ex rated, DC-powered 2-wire NIVOSWITCH vibrating fork level switches as an intrinsically safe power supply and amplifier unit. Without any programming, the galvanically isolated limit switch can produce relay-switching signals based on monitoring the vibrating fork's output current changes between the freely vibrating and the immersed states.

PKK-312

CERTIFICATES

Loop Displays

UNICONT PDF / PLK

The **UNICONT** series 2-wire passive loop-indicators are universally scalable process value indicators of NIVELCO, operating without the need for power supply. The process indicators find their use where the process value has no control function (such as switching ON/OFF, pressure control, etc.). The 3-wire HART® converter type **UNICONT** devices offer the optimal solution where local displaying is needed besides the remote data processing and the field transmitters having 4...20 mA output are needed to be integrated into HART® multidrop system. The devices are applicable not only for NIVELCO transmitters but for all transmitters which use standard 4...20 mA output.

The UNICONT PDF devices are digital, 2-wire passive / 3-wire active, field process indicators suitable for temperature, pressure, level, etc. indication with 6-digit SAP-202 display. Explosion-proof versions are available for hazardous environments. The HART® capable UNICONT PDF 3-wire process indicators require an additional power supply. Besides displaying the loop current or the process values, these units convert input current to HART® signals and enable devices with analog outputs to be integrated into HART® multidrop systems. A robust enclosure makes applications under harsh conditions also possible. The UNICONT PDF-600 series with flameproof (Ex d) stainless steel housing meets the special requirements of certain industry segments, such as food and beverage, maritime, oil & gas.

FEATURES

- 4...20 mA input
- 2-wire loop display
- 3-wire 4...20 mA + HART[®] transmitter
- Wall-mountable
- Scalable display
- IP67
- Ex variant

APPLICATIONS

- General display
- For 4...20 mA transmitters
- 4...20 mA-HART[®] converter
- Displaying level, volume, temperature, pressure, etc.

CERTIFICATES

Plug-in Loop Displays

UNICONT PLK

The UNICONT PLK-501 plug-in displays with 4-digit LED display can be connected to the 2-wire transmitters with its DIN 43650 / ISO 4400 connector (such as the NIPRESS pressure gauge / transmitter, AnaCONT LCK conductivity transmitter).

The displayed numerical values can be freely scaled to the current input by the user, setting the maximum and the minimum value.

FEATURES

- 4...20 mA input
- 4-digit LED display
- Swiveling display
- Operation without external power
- PNP switch output
- IP65

APPLICATIONS

- Mountable between standard ISO 4400 connectors
- For 2-wire transmitters with 4...20 mA output

Intrinsic Safety Isolator Power Supply Modules

The UNICONT PGK-301 Ex is a DIN-rail-mountable, partially intrinsically safe device that supplies limited power to two-wire transmitters following intrinsic safety rules. Furthermore, it provides galvanic isolation between explosion-hazardous and non-explosion-hazardous spaces between the power supply, signal input, and signal outputs. Galvanic isolation reduces the risk of ground loops and noise entering the current loop. Depending on the type, signal transmission can be the traditional 4...20 mA input / 4...20 mA output current transmission, or via digital HART[®] communication, or both simultaneously. The signal of the field current loop is transmitted to the safe space by microprocessor signal processing, which is inherently a high-precision transmission. Such accuracy is required for precision transmitters. If the fast conversion is preferred, choose the high-speed types. Intrinsic safety limits determine the maximum number of connected transmitters.

Switching-mode Power Supply Module

The rail-mountable NIPOWER PPK-421 and PPK-431 switching-mode power supply modules provide stabilized 12 or 24 V DC output for low-power consumption devices. The output current is limited by an electronic fuse. Both devices are short-circuit protected.

FEATURES

- Stabilized DC output
- Switching-mode power supply
- DIN-rail-mountable
- Short-circuit protection
- Overload protection
- Overvoltage protection
- IP20

APPLICATIONS

- Any transmitters
- Sensors
- Inductive, capacitive proximity switches
- Infrared sensors
- Ultrasonic Proximity sensors

HART[®] / Bluetooth[®] Modem

The **UNICOMM** interface modules can establish communication between HART[®]-capable field devices and the process-controller computer. The communication can be done via USB or RS485 line, and also via Bluetooth[®]. The **UNICOMM** HART[®] modems are applicable not only for NIVELCO transmitters but for all HART[®]-capable transmitters which use standard HART[®] communication. The device is galvanically isolated from both (*USB and HART[®]*) sides. When it is used as a HART[®]–USB modem, connected to the USB of a PC, the modem does not need an external power supply. The **UNICOMM SAK–305** modules can be connected to a suitable device with RS485 interface input, used as a HART[®]–RS485 modem. The communication protocol is HART[®] on the RS485 line. In this case, the device needs an external power supply. Ex variants can be connected to transmitters placed in hazardous areas.

TECHNICAL DATA

FEATURES

- Transferring measurement data to PC
- Connecting field transmitter to the PC via USB, RS485 or Bluetooth[®] (BLE, 5.x)
- 24 V current loop power supply (SAT–504)
- Switchable HART[®] terminal resistor (SAT-504, 250 Ω)
- DIN-rail-mountable version
- No need for power supply
- Galvanic isolation
- IP20

APPLICATIONS

- Communication interface (modem) between HART[®]-capable transmitters and PC
- Minimal system configuration: Windows XP, USB port

Flanges

NIFLANGE flanges are suitable for almost any device for installation in an existing flanged connection (e. g., tank, storage containers). With a wide range of internal process connections, it can be fitted to numerous devices. In addition it can be ordered welded to the device on request.

FEATURES

- Complies with DIN, ANSI, and JIS standards
- Materials:
 - Carbon steel
 - Carbon steel + PTFE
 - 1.4571 stainless steel
 - Polypropylene
- Size: DN15...DN300
- High-pressure resistance (max. 63 bar)
- BSP, NPT, M20×1.5 process connections
- Weldable stainless steel variants for:
 - NIVOSWITCH vibrating forks
 - NIVOMAG magnetic coupling switches
 - THERMOCONT TT temperature transmitters
 - PiloTREK WE non-contact microwave level transmitters

APPLICATIONS

It can be used with any threaded device, e.g. PiloTREK, NIVOCAP, EasyTREK, EchoTREK, NIVOCONT K, NIVOMAG, NIVOSWITCH, NIVOROTA, NIVOCAP CK, AnaCONT, THERMOCONT, NIPRESS.

Adapters

NIFIT adapters offer a convenient solution for integrating NIVELCO instruments into various existing process connections if the instrument's connection is incompatible. For instance, if the tank stub is ½" NPT while the instrument in stock is ½" BSP, or if the optimal instrument for a measurement task has a different process connection than the existing one at the measurement site. In such cases, modifying the process connection may involve significant additional costs. However, utilizing a **NIFIT** adapter proves to be a much more cost-effective alternative. These adapters are designed to accommodate a wide range of internal process connections and can be easily fitted to various instrument designs while ensuring compatibility with commonly used host connections.

Additionally, upon request, we can provide material quality certification for further assurance.

1.4571

٥

EAA-18B-0

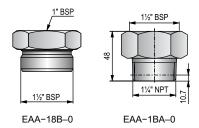

EAA-18D-0

FEATURES

- Complies with DIN standards
- Materials: 1.4571 stainless steel
- Size: threaded versions up to ¼"...2", Triclamp versions ¾"...3"
- High-pressure resistance (up to 1450 psi)
- BSP; NPT; M20x1.5; TriClamp process connections
- Easy to install

APPLICATIONS

It can be used with any threaded device (e. g. PiloTREK, NIVOCAP, EasyTREK, EchoTREK, NIVOCONT K, NIVOMAG, NIVOSWITCH, NIVOROTA, NIVOCAP CK, AnaCONT, THERMOCONT, NIPRESS).

SYSTEM COMPONENTS

Process Visualization Software

NIVISION is a VISION X9 based process visualization software that uses the XSDL (Extensible Structure Declaration Language) programming and configuring language. NIVISION can visualize a process control system built with NIVELCO instruments on a PC. The instruments can be intelligent transmitters with analog output, digital communication, or various switches based on different measuring principles. The tank-farm layout with tanks, instrumentation, and other process devices can easily be visualized. NIVISION offers a wide range of visualization elements of the measured and limit values, time-based trends, databases, and logs. Exporting and importing different database types is also a basic feature of the software. A clear and transparent overview of all processes involved in an application makes stock and material management a simple task with a well-constructed NIVISION project. Another great feature of the software is that a NIVISION project can be visualized on a remote computer (with no NIVISION installed) through a local area network (LAN) or the internet using a browser. It is a perfect solution for small and medium-sized process control systems.

FEATURES

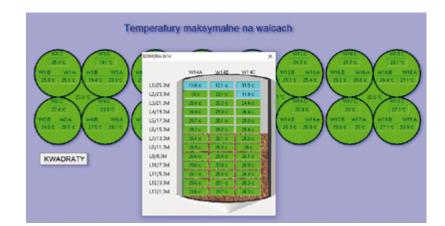

- Tank configuration
- Transmitter configuration
- Tank-farm visualization
- Displaying measured values
- Displaying limit values
- Trend monitoring
- Data logging
- Database handling
- Archiving
- Other log functions (alarms)
- Remote connection (LAN / Internet)

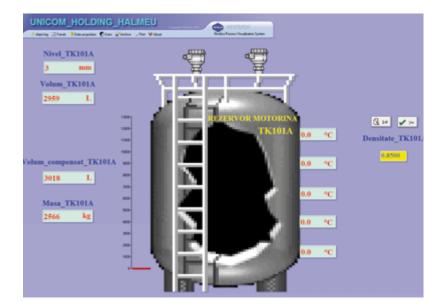

APPLICATIONS

The steps of customizing NIVISION for a specific application:

- The end-user draws the technological, operational and functional requirements of, the application.
- Based on the customer's requirements the developer configures the visualization project in the **NIVISION** developer system graphically and performes the required programming. Developmer mode can only be accessed by the project developer.
- The finalized project can be executed by the end-user using the NIVISION runtime system.

The basic element of the software is the "UNIT" which contains the applied instrument (with graphical representation), the instrument's variables, event handling, communication and data display. With the help of these units, a complete process instrumentation system can be set up for visualization.

HART[®] Configuration Software

The HART[®] configuration software is designed to detect, poll, and display primary measurement data as well as to program NIVELCO's HART[®]-compatible transmitters remotely.

Installed on a PC the software allows the menu driven remote programming (device parameters + HART commands). The software collects data from the detected NIVELCO units, performs cyclic polling, and displays the measurement data.

SYSTEM REQUIREMENTS

Operating system

Connection

Disk space

HART® modem

Memory

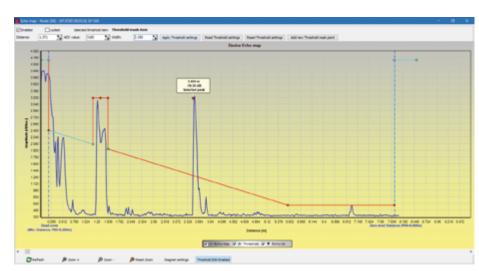

FEATURES

- Free configuration program
- Remote programming and querying measurement data for up to 15 HART[®]-compatible transmitters in one multidrop loop
- Linearization tables
- Echo Map
- Sensor calibration
- Measurement data monitoring and gathering
- Handling multiple HART[®] modems

APPLICATIONS

- Commissioning transmitters
- Remote programming
- Displaying measurement data
- Error detection
- Limited trend monitoring

MobileEView is NIVELCO's first mobile phone application that communicates with devices via Bluetooth[®]. The new product responds to today's challenges and needs and allows users to use NIVELCO devices easily and efficiently. The MobileEView application allows easy management of transmitter settings using the commissioning and maintenance wizards. Configuration settings can be saved and easily accessed for future use. The application displays data in a clear, structured way, making it easy to review. It also provides the possibility to test and verify.

Various test functions allow you to verify that the device works properly in the application, thus giving you more reliable measurements and guaranteeing optimal device performance. The pages are equipped with help functions and information services to assist the user in using the program and the devices.

MAIN INFORMATION

This product catalog is valid from **8 January, 2024***; henceforth, all prior product catalogs are obsolete. NIVELCO reserves the right to make any changes without any prior notice.

The illustrations of the products in this product catalog are only for informational purposes.

Doublechecking specifications in the datasheets, user, and programming manuals is recommended.

DELIVERY

There are four kinds of delivery:

Standard delivery:

- Standard products are usually manufactured within three weeks and shipped on the fourth week.**
- Delivery times may differ in the case of custom products. The estimated delivery time is either provided in the quotation or in the confirmation of the custom order.

Fast delivery:

- Units ordered under the NIVEX service are shipped within 5...8 working days from receiving the order if the order is accepted. Before ordering products with a NIVEX mark (in capital letters), availability of the relevant products in the required quantity must be checked and confirmed by NIVELCO. There is a 5% surcharge over the list price for the NIVEX service.
- NIV24 service is available for models indicated in tables at the bottom right of the relevant price sheets. Products ordered with the remark NIV24 will be shipped on the day following the confirmation of the order for a maximum of 5 items. There is a 5% surcharge over the list price for the NIV24 service.

WARRANTY

NIVELCO undertakes a guarantee of 1 to 5 years for its products.*** The warranty periods for each product group (1 year...5 years) are indicated on the price sheets of the respective products. NIVELCO fulfills the warranty obligations on the premises of the company.

ORDER CODES & ARTICLE NUMBERS

All order codes for complete instruments have seven characters (with some exceptions for special constructions with seven characters + "X..."). Order codes can be found in this product catalog, brochures, User and Programming Manuals and other marketing documents on our website. Article numbers are found in our Order Confirmations, Offers and Invoices. Article numbers have eight characters, and they are constructed like the order code + "M" (in some cases, this last character may be different). This distinction between order code and article number has relevance only to NIVELCO's internal administration, not to the technical content.

e. g., order code: SGP–380–4 article number: SGP3804M

INSPECTION & CLEANING

There is a 25.00 EUR inspection fee for checking returned devices. It is dropped if the repair or replacement is ordered or it is covered by warranty. We charge 25.00 EUR for cleaning returned units that are dirty. If a device is returned without a thorough cleaning, disinfection, and a correctly filled and signed Returned Equipment Handling Form, we reserve the right to return or destroy the device at the purchaser's expense, whichever the purchaser chooses.

- * In case of any discrepancies between the corrsponding printed and online data or other kind of information, please consider the online information as the valid one.
- ** The indicated delivery time varies depending on the quantity ordered.
- *** Except for analytical sensors!
